- Small form-factor 0.80 x 0.56 inches
- Power handling of 2W

CASE STYLE: RA2937

Product Overview

Mini-Circuits' ZEQ-7-24K+ is a broadband, connectorized negative slope equalizer, with a slope of 7.4 dB typ. over the range of DC to 20 GHz. The model is bi-directional and offers excellent electrical performance in applications where frequency dependent losses due to skin-depth (positive gain slope) hinders the overall system performance. The small form factor model comes with complementary connectors to avoid use of any additional adapters and operates over a wide temperature range of -55°C to +105°C.

Key Features

Feature	Advantages
Minimal slope deviation of +/- 0.4 dB typ.	Provides low signal distortion over the broadband range from DC – 20 GHz
Good 50 Ohm match over broadband	Model offers good return loss of 15 dB typ. over entire band, minimizing signal distortion.
Small form factor	Model is offered in a small case size of 0.80" x 0.56" providing advantages in densely clustered systems.
Wide operating temperature	The device operates over a wide temperature range of -55°C to +105°C with slope deviation of +/- 0.4 dB typ.
