PRODUCT OVERVIEW

Mini-Circuits' ZVE-373LN-K+ is a Class-A, three-stage, unconditionally stable amplifier providing flat gain over an extremely wide frequency range from 28 to 37 GHz. This model is capable of delivering up to 9mW output power at P1dB with high output IP3 supporting a wide range of sensitive, high-dynamic range receiver applications and many systems where high performance over wideband is needed. It operates on a +12V supply and features built-in safety features including protection against reverse bias and immunity to accidental open or short loads for 2 minutes. The amplifier comes in a rugged, compact case (1.2 x 0.46 x 0.45") with K-type (2.92mm) connectors and an optional heatsink for efficient cooling.

KEY FEATURES

Feature	Advantages
Wideband, 28 to 37 GHz able to work from 25 to 40 GHz	Enables a single amplifier to be used in a wide range of applications
Excellent Gain flatness, ±1.5 dB across full frequency range	Provides consistent performance across its operating frequency, minimizing the need for external equalizing networks in wideband applications
High Gain, 20 dB typ.	Reduces the number of gain stages, lowering component count and overall system cost
Class A Amplifier	Provides good linearity with low signal distortion.
Low Noise and High OIP3: • NF, 2.5 dB typ. • OIP3, +20 dBm typ.	The combination of low noise and high OIP3 makes the ZVE-373LN-K+ ideal for use in low noise receiver front end (RFE) as it gives the user the advantages of sensitivity and two-tone IM performance at both ends of the dynamic range
Rugged design	Built-in protection against reverse bias and accidental open and short loads provides added reliability for demanding operating conditions

▲ Heatsink not included. Alternative heatsinking and heat removal must be provided by the user to limit maximum base-plate temperature to 85°C, in order to ensure proper performance. For reference, this requires thermal resistance of user's external heatsink to be 20°C/W max.
