PRODUCT OVERVIEW

Mini-Circuits' Low Pass Filter LFCV-45+ is an LTCC based 7 section design, that extends the lower frequency cutoff range of the existing LFCN series to 45 MHz. Systems that previously relied on active or lumped element filtering to support these lower frequencies can save power and system complexity by integrating the LFCV-45+ into new designs. These filters are offered in a EIA 1210 package size and have a typical stop band rejection of 50 dB.

KEY FEATURES

Feature	Advantages
Small Size (3.2mm x 2.5mm)	Available in the size of typical resistors or capacitors (EIA 1210), the ultra small LFCV series integrates up to 7 low pass sections in a simple SMT chip form factor.
High Power Handling	The LFCV series can withstand up to 7W CW signal without damage making this filter ideal for use in medium power to transmit paths.
Temperature Stability	Over a 180°C operating temperature range (-55°C to +125°C), the LFCV series ceramic filters typically exhibit less than 0.2 dB pass band insertion loss variation, and less than 0.4 dB rejection variation at the 20 dB point (as measured on a single unit)
High Rejection	Achieving 50 dB rejection @ 180 MHz; the LFCV-45+ provides a versatile anti aliasing solution for high data rate receivers.
