

6-MONTH GUARANTEE ON TEST CABLES

Mini-Circuits Six (6) Month Product Guarantee* for CBL series RF Cable Assemblies is a differentiating feature versus nearly every other test cable supplier. Test Cables traditionally undergo tremendous strain due to many connections which are a normal part of nearly every test lab application. Furthermore, a test environment often results in stress on the cable and cable-to-connector interface due to the high number of bends and flexures required during testing processes.

Mini-Circuits is able to offer this Product Guarantee due to the robust design feature inherent in all our test cable designs including:

- Use of stainless steel connectors
- Integration of additional metal protection within the back-shell
- 100% solder attachment to the connector
- Triple thick-strain relief applied to the connector body, back-shell and cable.

In addition to the robust construction, Mini-Circuits has performed qualification testing to validate the robustness of design including Super-Flex testing up to 20,000 cycles with tight radius bends at the connector/cable interface. This stress testing along with 100 thermal cycles provides Mini-Circuits to the confidence to offer this unique satisfaction guarantee with confidence and integrity.

**Mini-Circuits will repair or replace your test cable at its option if the connector attachment fails within six months of shipment. This guarantee excludes cable or connector interface damage from misuse or abuse.*
