PRODUCT OVERVIEW

BFHKL-4951+ is a miniature low temperature co-fired ceramic (LTCC) ultra-high stopband rejection band pass filter with a 4.3 to 5.3 GHz passband supporting a variety of applications. This model achieves 60 dB typical stopband rejection up to 12.3 GHz, with the capability of being mounted on coplanar waveguide layouts. Housed in a small 4.95 mm by 3.65 mm ceramic form factor, the filter is ideal for dense signal chain PCB layouts where it complements MMIC size and performance. The BFHKL family with integrated interposer board enables installation onto PCB layouts with automated manufacturing equipment. This model provides 3.8 dB typical insertion loss over a wide band due to its rugged monolithic construction. The LTCC fabrication process assures minimal RF performance variation while delivering a product that is well suited for environmental extremes of high humidity and temperature.

KEY FEATURES

Features	Advantages
Surface mountable due to Integrated Interposer Board	Enables installation with automated manufacturing equipment making this suitable for high-volume processes.
Wide Rejection	Provides high stopband rejection of 60 dB typical up to 12.3 GHz. Additional support for alternate PCB layouts is available by contacting Mini-Circuits Applications team.
Small size (4.95 mm x 3.65 mm)	Allows for high layout density of circuit boards, while minimizing effects of parasitics.
Wide operating and storage temperature, -55 to 125°C	Enables use in high reliability and extreme environment condition such as aerospace & defense applications.
Cost effective	LTCC is a scalable technology that is cost effective due to ease of production in high-volume
