The Big Deal

- Flat group delay
- Steep rejection up to 3000 MHz
- Thin package

Product Overview

The BPF-V1000+ is a 50Ω bandpass filter fabricated using SMT technology. This bandpass filter covers from 940-1060 MHz. It has very low group delay flatness for the committed rejection performance. Equalization had made with in the circuit to achieve this. So that this filter provides sharp rejection with flat group delay in the flat gain requirement application.

Key Features

Feature	Advantages
Low group delay flatness	Can be used in flat gain requirement application
Steep rejection	This enables the filter to attenuate spurious signals near the passband edges and goes up to 3000 MHz
Thin package	Helps to use in the small housing.
