PRODUCT OVERVIEW

The EHC-24L+ is a low current, wideband gain block that operates up to 20 GHz fabricated using highly reliable HBT process. This Darlington pair amplifier delivers excellent gain flatness, good return loss, low current with acceptable P1dB and OIP3 across a wide bandwidth without the need of external matching network. It has highly repeatable performance from lot to lot and it is enclosed in a 4-lead ceramic package.

KEY FEATURES

Feature	Advantages
Super Wideband: DC to 20 GHz	General purpose wideband amplifier is suitable for various applications.
Low Current, 19.1mA	Low current consumption is ideal for use in amplifier chain.
Excellent gain flatness ± 1.1dB up to 10GHz ± 2.7dB up to 20GHz	As a desirable characteristic of a wideband amplifier, excellent gain flatness allows amplification of a signal without changing the waveform in time domain.
No external matching component required	EHC-24L+ provides typical input & output return loss of 15 dB up to 20 GHz without the need for any external matching components.
