Product Overview

The HXG-242+ (RoHS compliant) is an advanced amplifier module combining high dynamic range MMIC technology and optimization circuits to provide industry leading linearity over a focused frequency range. It is packaged in a Mini-Circuits System in Package (MSiP) module (6.4mm x 7.0mm x 2.4mm) using a sealed ceramic cover and having gold over Ni for excellent solderability.

Key Features

Feature	Advantages
Optimized Frequency Range	Covering primary wireless communications bands: Cellular, PCS, LTE
Extremely High IP3 vs. Current 46.6 dBm typ at 1500 MHz versus DC Power Consumption of 146mA	The HXG-242+ offers industry leading IP3 performance relative to device size and power consumption. The combination of the design and E-PHEMT provides enhanced linearity as evidence in the IP3. This feature makes this amplifier ideal for use in: • Driver amplifiers for complex waveform up converter paths • Drivers in linearized transmit systems • Secondary amplifiers in ultra High Dynamic range receivers
No External Matching Components Required	Unlike competing products, Mini-Circuits HXG-242+ provides Input and Output Return Loss of 10 dB up to 1.5 GHz without the need for any external matching components
Low Noise Figure: 2.4dB typ.	A unique feature of the HXG-242+ which separates this design from all competitors is the low noise figure performance in combination with the high dynamic range.

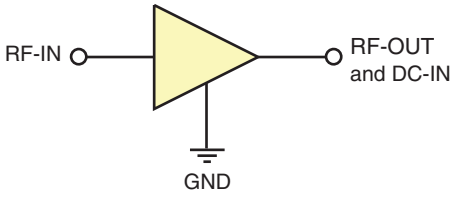
General Description

The HXG-242+ (RoHS compliant) is an advanced amplifier module in a Mini-Circuits System in Package (MSiP) which includes internal matching networks to offer extremely high dynamic range module. It is housed in a ceramic package 6.4mm x 7.0mm x 2.4mm.

simplified schematic and pin description



Function	Pin Number	Description
RF IN	2	RF input pin. This pin requires the use of an external DC blocking capacitor chosen for the frequency of operation.
RF-OUT and DC-IN	5	RF output and bias pin. DC voltage is present on this pin; therefore a DC blocking capacitor is necessary for proper operation. An RF choke is needed to feed DC bias without loss of RF signal due to the bias connection, as shown in "Recommended Application Circuit", Fig. 2
GND	1,3,4,6	Connections to ground. Use via holes as shown in "Suggested Layout for PCB Design" to reduce ground path inductance for best performance.
