CASE STYLE: JV1210C-7

The Big Deal

- Good rejection, 40 dB typical
- Rugged, ceramic construction
- Small size, 0.126" x 0.098" x 0.039" (1210)
- Good power handling, 3.2W

Product Overview

Mini-Circuits' LFCV-1452+ is an LTCC low pass filter with a passband from DC to 14500 MHz, supporting a variety of applications. This model provides 1.4 dB typical passband insertion loss and provides a very good stopband rejection due to strategically constructed layout with minimal interaction between components. It handles up to 3.2W RF input power and provides a wide operating temperature range from -55 to +125°C. Housed in a small 1210 ceramic form factor, the filter is ideal for dense PCB layouts and with minimal performance variation due to parasitics.

Key Features

Feature	Advantages
Ultra-wide stopband	The LTCC lowpass filter provides a very good stopband rejection until 40 GHz suitable for high end applications.
LTCC Construction	Provides repeatable performance in a rugged, ceramic package well suited for tough environments such as high humidity and temperature extremes.
Small size (0.126" x 0.098" x 0.039")	Saves space in dense circuit board layouts and minimizes the effects of parasitics.
Good power handling, 3.2W	Supports a wide range of system power requirements.
