PRODUCT OVERVIEW

LFCV-2002+ is a miniature low temperature co-fired ceramic (LTCC) low pass filter with a DC to 20 GHz passband supporting a variety of applications. This model provides 1.6 dB typical insertion loss over a wide band due to its rugged monolithic construction. Housed in a small 1210 ceramic form factor, the filter is ideal for dense signal chain PCB layouts where it complements MMIC size and performance. The LTCC fabrication process assures minimal RF performance variation while delivering a product that is well suited for environmental extremes of high humidity and temperature.

KEY FEATURES

Feature	Advantages
Ultra-wide Stopband	The LTCC lowpass filter provides a very good stopband rejection to 50 GHz suitable for high end applications.
LTCC Construction	Provides repeatable performance in a rugged, ceramic package well suited for tough environments such as high humidity and temperature extremes.
Small footprint (1210)	Allows for high layout density of circuit boards, while minimizing effects of parasitics.
Good power handling, 1W	Supports a wide range of system power requirements.
