## PRODUCT OVERVIEW

Mini-Circuits' MTH-63-SFSF+, MTH-63-SFSM+, and MTH-63-SMSM+ are SMA matched thru calibration standard intended for VNA measurements of any SMA-Female or SMA-Male DUT (device under test). The standards are supplied in a cardboard storage and display case.

MTH-63-SFSF+, MTH-63-SFSM+, and MTH-63-SMSM+ are offered in Mini-Circuits' calibration kit, KSOLT-63-S+, which is supported by Mini-Circuits [eVNA-63+](#) vector network analyzer right out of the box, with all calibration definitions pre-loaded within the eVNA Studio software. The standards can also be used as a cost-effective, high-performance alternative to calibration kits from a wide range of VNA suppliers.

## KEY FEATURES

Feature	Advantages
Cost effective	Cost effective when comparing against competitors with similar specifications
2 Port Calibration	Combine with an SOL to make fully calibrated 2-port or greater measurements with a VNA
Excellent return loss, 42 dB typ	Precision calibration standards with high return loss minimize the measurement errors within a VNA system
Very low insertion loss, 0.04 dB typ.	Provides excellent signal power transmission from input to output.
