PRODUCT OVERVIEW

The PMA3-73-1W+ is a GaAs MMIC Power Amplifier operating from 300 to 7500 MHz. The amplifier provides 20.1 dB of gain, +33.5 dBm saturated output power, and achieves +37 dBm output IP3, while operating from a single +12 V power supply. In addition, it is internally matched to 50 Ohms and comes in a 3x3 mm 12-Lead QFN-style package. These characteristics make it ideally suited for wideband test instrumentation and defense systems that require high operating output power, while maintaining very low distortion characteristics.

KEY FEATURES

Feature	Advantages
High P1dB Typ. +31.7 dBm	Flat gain and output power make this device excellent for wideband systems from 300 to 7500 MHz that require at least 1 W of operating output power over the full band.
Low Noise Figure Typ. 2.5 dB	High operating output power accompanied by low noise figure enables a significant signal to noise ratio advantage for systems requiring high dynamic range.
High OIP3 Typ. +37 dBm	High operating OIP3, as well as low 2nd and 3rd harmonic responses, provide very low in-band distortion products, which are typically needed for high fidelity measurement systems.
3x3 mm 12-Lead QFN-Style Package	Small footprint saves space in dense layouts while providing low inductance, repeatable transitions, and excellent thermal contact to the PCB. Industry standard packaging allows for ease of assembly in high volume manufacturing processes.
