Product Overview

Mini-Circuits' PWR-6GHS is a low cost compact sensor-head that turns any PC with a USB port into an average power meter for CW (continuous waveform) signals. The sensor has a 50 dB input dynamic range allowing measurement of RF powers down to -30 dBm, over 1 to 6000 MHz.

The USB HID interface is "plug & play" compatible, meaning no driver installation is required. Full software support is provided, including our user-friendly GUI application for Windows and a full API with programming instructions for Windows and Linux environments (both 32-bit and 64-bit systems).

Key Features

Feature	Advantages
Low power measurement @ 30 ms speed	Accurate and fast power measurements @ 30 ms all the way down to -30 dBm facilitates test applications with high loss and rapid power variations
Automatic measurement compensation	Power measurements are automatically adjusted by the sensor to maintain accuracy with variations in the ambient temperature and across the bandwidth of the sensor
No User calibration required	Accurate power measurements can commence as soon as the sensor is connected since it does not require any zero or reference measurements
Excellent impedance match	Input VSWR of 1.10:1 typ reduces measurement errors due to impedance mismatch
