PRODUCT OVERVIEW

Mini-Circuits' ZTM2-8SP8T-26 houses 8 independently controlled electro-mechanical SP8T switches. Each switch operates over an extremely wide bandwidth, from DC to 26.5 GHz with high isolation and low insertion loss. The absorptive switches are failsafe, with a break before make configuration, and lifetime of 2 million switching cycles when used within the noted specifications.

The switches are housed in a rugged 19-inch rack chassis, 5U height, with all SMA (female) RF connectors on the front. LED switch state indicators on the front panel enable visual display of all switch states. The modular design of the ZTM2 series switch rack supports easy maintenance and re-configuration in the field, without the need to return the whole system to a Mini-Circuits facility.

The switch assembly can be controlled via USB or Ethernet (supporting SSH, HTTP and Telnet network protocols). Full software support is provided, including our user-friendly GUI application for Windows and a full API with programming instructions for Windows and Linux environments.

Custom switch configurations can be configured to fit any requirement, using Mini-Circuits' online configurator tool at <https://www.minicircuits.com/WebStore/ztm2.html>.

KEY FEATURES

| Feature | Advantages |
|-------------------------------|---|
| Mechanical switches | Mechanical absorptive switches provide low loss, high isolation, high reliability, repeatable performance and internal termination of input signals on the disconnected paths |
| Fail-safe design | The switches revert to a known default state when the DC supply is removed, allowing their use in systems that must continue to operate safely in the event of power failure |
| Secure Ethernet communication | Support for SSH (Secure Shell protocol) provides a means for secure communication over Ethernet networks with strict security policies. |
| Rack-mount chassis | 19", 5U rack-mountable chassis suits integration in automated production test environments. |

1. Isolation measured between Com and any disconnected port. Example: Isolation for Com to 1 is the leakage measured at port 1 from a signal input at Com when the active switch path is set to Com to 2

2. Return loss into Com when active or ports 1-8 in any state; Com is reflective when disconnected

3. Maximum power into any internal termination is 1W per port, 3W total per switch

4. Hot switching power above this level will degrade the switch lifetime
