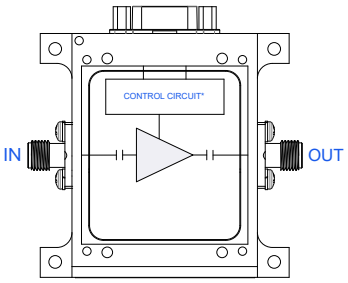
FUNCTIONAL DIAGRAM



PRODUCT OVERVIEW

Mini-Circuits' ZVA-20543TC+ is a coaxial, wideband, medium power amplifier, operating from 20 to 54 GHz which automatically adjusts gain in real time to offset the effects of baseplate temperature change. The model operates over a single supply range of +10 to +15 V, allowing users to choose their desired operating voltage. Internal DC-DC conversion circuitry maintains consistent efficiency over the full input voltage range. The amplifier incorporates a full suite of control and diagnostic tools, such as output power monitoring, amplifier fault tracking, internal temperature monitoring, enable/disable functionality for lower power consumption, with ability to self-compensate it's Gain over temperature changes. Smaller gain variations over temperature can be achieved in custom narrower bandwidths. Please reach out to factory for more information.

The optional cable harness with integrated TTL to USB converter allows control of the amplifier from a PC moments after unboxing. Several DC-protection features such as over-voltage, reverse voltage, and in-rush current protection protect the amplifier from damage in case of unexpected spikes in voltage during operation. The high gain, low noise, medium power, and wideband frequency operation combined with digital control makes this amplifier an ideal choice for testing and instrumentation applications.

KEY FEATURES

Features	Advantages
Compensated Gain, -20°C to +60°C	A single amplifier can be used for a variety of applications, where gain or power levels may need to be adjusted without user interface for optimal performance in a system.
Telemetry Reporting	With built in temperature monitoring, power detection and alarm features, this amplifier gives the user valuable information that would otherwise require additional test equipment and control circuitry. See Telemetry Feature table for more information.
Wide DC Operating Voltage, +10 To +15 V	The device can operate from +10 to +15 V, maintaining consistent DC power consumption with no effect on RF performance, and facilitating ease of use in test setups with existing established voltage supplies.
DC Protection • Over-voltage • Reverse voltage • In-rush current	The internal DC circuitry allows the amplifier to be protected from external mishandling or unexpected spikes in voltage that could lead to catastrophic failures in the field.

TELEMETRY FEATURES

Feature	Description
Temperature Monitoring	Allows the user to continuously monitor the internal temperature of the amplifier (see page 5 for "TEMP MON OUTPUT VOLTAGE OVER INTERNAL TEMPERATURE OF MODULE" GRAPH)
Mute/Unmute	Allows the user to mute or unmute the amplifier
Output Power Detector	Allows the user to continuously monitor the output power of the amplifier
Alarm	Amplifier will go into alarm if internal temperature or current exceed factory set limits

DETERMINING MAXIMUM THERMAL RESISTANCE OF USERS' EXTERNAL HEAT SINK

$$\textit{MAXIMUM THERMAL RESISTANCE} = \frac{\textit{MAXIMUM OPERATING CASE TEMP} - \textit{MAXIMUM USER AMBIENT TEMP}}{\textit{POWER DISSIPATION}}$$

Example:	MAXIMUM OPERATING CASE TEMP = +60 °C (CHECK MAXIMUM RATINGS TABLE FOR THIS VALUE) MAXIMUM USER AMBIENT TEMP = +30 °C (USER DEFINED) POWER DISSIPATION = 26 WATTS (CHECK MAXIMUM RATINGS TABLE FOR THIS VALUE) THEN MAXIMUM ALLOWABLE THERMAL RESISTANCE =2 °C/W

INCLUDED ACCESSORIES

B20-9-0065-15 is a "Pigtail" connector included with every purchase of ZVA-20543TC(X)+. B20-9-0065-15 is a shielded cable with stripped wires (#28AWG) on one end and a connector on the other end designed to mate to the ZVA-20543TC(X)+. These bare wires enable the customer to assemble their own cable as required to interface with the ZVA-20543TC(X)+ (cable length is 3ft/ 0.9meters).
