The Big Deal

- Flat group delay over passband
- Narrow bandwidth
- Good VSWR (1.2:1 typical)
- Fast roll-off
- High rejection

Product Overview

BBP-101+ is a 50Ω bandpass filter in a connectorized package. The bandpass filter covers from 94 to 108 MHz, and offers good matching within the passband with high out of band rejection. The filter uses miniature high Q capacitors and wire welded inductors for high reliability. It has repeatable performance across production lots and consistent performance across temperature.

Key Features

Feature	Advantages
Flat group delay over passband	The model has group delay over passband around 45 ns
Good VSWR, 1.2:1 typical over passband	This provides well matched input and output ports.
High rejection	This enables the filter to attenuate spurious signals and reject harmonics for broad frequency band.
Connectorized package	Connectorized package is easy to interface with other devices and well suited for test setups.
