PRODUCT OVERVIEW

The EHA-163L+ is a low current, wideband gain block that operates up to 16 GHz fabricated using highly reliable HBT process. This Darlington pair amplifier delivers excellent gain flatness, good return loss, low current with acceptable P1dB and OIP3 across a wide bandwidth without the need of external matching network. It has highly repeatable performance from lot to lot and it is enclosed in a 2mm x 2mm 6-lead package.

KEY FEATURES

Feature	Advantages
Super Wideband: DC to 16 GHz	Generate purpose wideband amplifier is suitable for various applications.
Low Current, 20mA	Low current consumption is ideal for driver amplifier.
Excellent gain flatness, ± 0.75 dB up to 12 GHz	As a desirable characteristic of a wideband amplifier, excellent gain flatness allows amplification of a signal without changing the waveform in time domain.
No external matching component required	EHA-163L+ provides input & output return loss of 10 dB up to 16 GHz without the need for any external matching components.
