

MMIC

# Power Splitter/Combiner Die

EP2RKU-D+

2 Way-0° 50Ω DC to 18 GHz

## The Big Deal

- Ultra-Wide Bandwidth, DC to 18 GHz
- High Isolation, 21 dB typ. at 12 GHz
- High Power Handling, 0.6W as a splitter/combiner

## Product Overview

Mini-Circuits' EP2RKU-D+ is a MMIC 2-way 0° splitter/combiner Die designed for wideband operation from DC to 18 GHz supporting many applications requiring high performance across a wide frequency range including all the LTE bands through WiMax an WiFi, as well as instrumentation and more. This model provides excellent power handling up to 0.6W (as a splitter/combiner) with low insertion loss, good isolation, and low phase and amplitude unbalance. Manufactured using GaAs IPD technology, the EP2RKU-D+ provides a high level of ESD protection and excellent repeatability.

## Key Features

Feature	Advantages
Wideband, DC to 18 GHz	One power splitter can be used in all the LTE bands through WiMAX and WiFi, saving component count. Also ideal for wideband applications such as military and instrumentation.
Excellent power handling <ul style="list-style-type: none"><li>• 0.6W as a splitter</li><li>• 0.6W internal dissipation as a combiner</li></ul>	In power combiner applications, half the power is dissipated internally. EP2RKU-D+ is designed to handle 0.6W internal dissipation as a combiner allowing reliable operation without excessive temperature rise.
Unpackaged Die	Enables user to integrate it directly into hybrids.

### Product Features

- Wide bandwidth, DC to 18 GHz
- Excellent amplitude unbalance, 0.1 dB typ. up to 18 GHz
- Good phase unbalance, 0.5 deg. typ. at 12 GHz
- High ESD level
- Patent pending

### Typical Applications

- WIMAX
- ISM
- Instrumentation
- Radar
- WLAN
- Satellite communications
- LTE

## Assembly and Handling Procedure

1. Storage  
Dice should be stored in a dry nitrogen purged desiccators or equivalent.
2. ESD  
MMIC dice are susceptible to electrostatic and mechanical damage. Die are supplied in antistatic protected material, which should be opened in clean room conditions at an appropriately grounded anti-static workstation. Devices need careful handling using correctly designed collets, vacuum pickup tips or sharp antistatic tweezers to deter ESD damage to dice.
3. Die Attach  
The Die mounting surface must be clean and flat. Using conductive silver filled epoxy, recommended epoxies are DieMat DM6030HK-PT/H579 or Ablestik 84-1LMISR4. Apply sufficient epoxy to meet required epoxy bond line thickness, epoxy fillet height and epoxy coverage around total Die periphery. Parts shall be cured in a nitrogen filled atmosphere per manufacturer's cure condition. It is recommended to use antistatic Die pick up tools only.
4. Wire Bonding  
Bond pad openings in the surface passivation above the bond pads are provided to allow wire bonding to the dice gold bond pads. Thermosonic bonding is used with minimized ultrasonic content. Bond force, time, ultrasonic power and temperature are all critical parameters. Suggested wire is pure gold, 1 mil diameter. Bonds must be made from the bond pads on the Die to the package or substrate. All bond wires should be kept as short as low as reasonable to minimize performance degradation due to undesirable series inductance.
