RMS Power Sensor

Mini-Circuits

50Ω 0.05 to 18 GHz -60 to +20 dBm

dBm True RMS

N-Type Male

THE BIG DEAL

- RMS (average) power measurements with 80 dB dynamic range
- Measure wideband modulated & multi-tone signals
- Measure pulsed signals with moderate duty cycles (≥2%)
- Integrated LCD display for quick power readings
- Ethernet & USB control

APPLICATIONS

- 5G FR1, WiFi 6E, Bluetooth device testing
- Ku band satcom, radio and radar testing
- Average power measurement of ASK, FSK, OFDM, QAM, LTE modulations

PWR-18RMS-RC

PRODUCT OVERVIEW

Mini-Circuits' PWR-18RMS-RC is a high-performance and cost-effective RMS power sensor for measurement of average power levels in a diverse range of test applications. The sensor operates from 50 MHz to 18 GHz, detecting input signals as high as +20 dBm and all the way down to -60 dBm. The compact package includes a rubberized outer case for protection and portability, N-type RF input connector, integrated LCD screen, SMB trigger input / output options and Ethernet / USB control.

The included measurement software for Windows walks the user through the power sensor settings, displays the current measurements and provides powerful data recording and export capabilities. A full API for Windows is also provided, with programming instructions and examples for Windows and Linux systems to set up automated power measurements in a range of common programming environments. Full control is available via Ethernet and USB, with the integrated LCD screen providing a convenient local read-out to the operator of power measurements and key settings.

Mini-Circuits has a wide range of high-performance power sensors available on our <u>website</u>. Consider the <u>PWR-18PWHS-RC</u> peak power sensor if measurements of fast pulses, high crest factor signals or pulse rise / fall times are needed.

KEY FEATURES

| Feature | Advantages |
|------------------------------------|--|
| True RMS sensor | Cost effective measurements of average power levels over time for a wide range of applications. Measure CW, modulated, pulsed and multi-tone signals with a single sensor. |
| Wide measurement bandwidth | Accurately measure multi-tone signals and wideband digital modulations (including WiFi devices). The sensor is calibrated for highly accurate average power measurements of signals with bandwidths up to ~100 MHz. Repeatable measurements will be returned over even wider bandwidths (subject to a roll-off in absolute accuracy), permitting use of the sensor for comparison of relative signal levels. |
| Automatic measurement compensation | Start measuring straight away. The sensor automatically compensates power measurements based on the internal ambient temperature sensor and the user entered measurement frequency. |
| Flexible control options | Connect with a PC via either Ethernet or USB and measure using the included measurement software or API for au- tomation. Once configured and powered, the sensor can be used as a standalone tool with measurements displayed on the integrated LCD screen. |
| Trigger in / out | Synchronize measurements between test instrumentation using the external trigger input / output ports. |

| Effect of Multi-Tone Signals (within span of 100 MHz) | _ | 0.05 - 18 | - | ±0.1 | _ | dB | |

1. All specifications after 30 minutes warmup time and zeroing.

Maximum continuous safe operational power limit: +23 dBm.
 Tested with CW signal and default sample period. For Sample period<(10 x Signal period), maintain Sample period=(N x Signal period).
 With "Buffer Mode" setting enabled and "Screen Display - On" setting disabled.

5. When Ethernet control is enabled, it is recommended to use an external power supply (USB-AC/DC-5 or equivalent), a powered hub, or USB 3.0/3.1 port, in order to supply the current.

6. Trigger Out is set momentarily to logic high after each sample period.
 7. For sample periods 20 ms or less. Minimum pulse & interval increase for sample periods greater than 20 ms.

CONTROL INTERFACES

| Ethernet Control | Supported Protocols | TCP / IP, HTTP, Telnet, DHCP, UDP (limited) |
|------------------|-------------------------------------|---|
| Ethemet Control | Max Data Rate | 100 Mbps (100 Base-T Full Duplex) |
| | Supported Protocols | HID (Human Interface Device) - High-speed |
| USB Control | Min Communication Time ⁹ | 400 μs typ (full transmit/receive cycle) |

9. USB Min Communication Time is based on the polling interval of the USB HID protocol (125 µs polling interval, 64 bytes per packet), medium CPU load and no other high-speed USB devices using the USB bus

SOFTWARE & DOCUMENTATION

Mini-Circuits' full software and support package including user guide, Windows GUI, API, programming manual and examples can be downloaded free of charge (refer to the last page for the download path).

A comprehensive set of software control options is provided:

- GUI for Windows Simple software interface for control via Ethernet and USB.
- Programming / automation via Ethernet:
 - Complete set of control commands which can be sent via any supported protocol.
 - Simple to implement in the majority of modern programming environments.
- Programming / automation via USB:
 - DLL files provide a full API for Windows with a set of intuitive functions which can be implemented in any programming environment supporting .Net Framework or ActiveX.
 - Direct USB programming is possible in any other environment (not supporting .Net or ActiveX).

Please contact testsolutions@minicircuits.com for support.

| GUI | Windows 7 or later |
|------------------------|---|
| USB API DLL | Windows 7 or later and programming environment with ActiveX or .NET support |
| USB Direct Programming | Linux, Windows 7 or later |
| HTTP or Telnet | Any computer with a network port and Ethernet-TCP/IP (HTTP or Telnet protocols) support |
| Hardware | Intel i3 (or equivalent) or later |
| Control Cable | Power sensor to be used with the supplied USB cable only |

MINIMUM SYSTEM REQUIREMENTS

GRAPHICAL USER INTERFACE (GUI) FOR WINDOWS - KEY FEATURES

- Connect via USB or Ethernet (HTTP, Telnet) to control the module.
- Control multiple power sensors at once.

| Mini-Circuits Smart RF Power Meter | (Ver F3X1) − □ × |
|------------------------------------|-----------------------------------|
| Run Program - USB Control: | Run Program - Ethernet Control: |
| | Device Ethernet Parameters: |
| USB | IP Address: |
| | Use HTTP Use Telnet (port 23) |

- Set compensation frequency and monitor power measurement.
- Configure measurement (offsets, relative power readings, averaging, set trigger mode, etc.).
- Zero the power sensor (recommended at the start of a new measurement session).
- Schedule data recording.

| 🖬 Mini-Circuits 🛛 Sm | × | |

- Set the sample period (the time over which the sensor will average the power) between 100 µs and 1s.
- Select from 3 trigger options:
 - 1. Free No trigger / free running measurements.
 - 2. External On Rise Measurements are triggered on the rising edge of an external trigger signal.
 - 3. External On Fall Measurements are triggered on the falling edge of an external trigger signal.
- Set the buffer size to send over the latest X number of measurements once a SCPI command is received (refer to programming manual for details).
