### Product Overview

Mini-Circuits' PWR-6RMS-RC is a compact sensor-head that turns any PC into true RMS power meter for CW, modulated and multi tone signals. The sensor has an 55 dB input dynamic range and wide bandwidth, allowing measurement of RF powers down to -35 dBm over 50 to 6000 MHz.

The USB HID interface is "plug & play" compatible, meaning no driver installation is required, while the additional Ethernet interface allows remote power measurements over a network. Full software support is provided, including our user-friendly GUI application for Windows and a full API with programming instructions for Windows and Linux environments (both 32-bit and 64-bit systems).

### Key Features

Feature	Advantages
True RMS	Allows measurement of CW, modulated and multi tone signals
USB & Ethernet control	USB HID and Ethernet (HTTP / Telnet) interfaces provide easy compatibility with a wide range of software setups and programming environments
Automatic measurement compensation	Power measurements are automatically adjusted by the sensor to maintain accuracy with variations in the ambient temperature and across the bandwidth of the sensor
No User calibration required	Accurate power measurements can commence as soon as the sensor is connected since it does not require any zero or reference measurements
Excellent impedance match	Input VSWR of 1.10:1 typ reduces measurement errors due to impedance mismatch
