☐ Mini-Circuits

50Ω 0.01 to 8 GHz, -60 dBm to +20 dBm

THE BIG DEAL

- Peak, average, crest factor & duty cycle measurements
- Modulated, pulsed & CW signal types
- Wide dynamic range, -60 to +20 dBm
- 30 MHz video bandwidth
- 20 million samples / sec
- USB and Ethernet control

APPLICATIONS

- Pulse profiling & statistical signal analysis
- ASK, FSK, OFDM, QAM, LTE modulations
- VHF / UHF / L / S / C band radar
- Signal level calibration
- Remote power monitoring

PRODUCT OVERVIEW

Mini-Circuits' PWR-8PW-RC is a high performance sensor for any power measurement application from 10 MHz to 8 GHz. The 10 MHz internal modulation bandwidth, coupled with a data processing rate of 20 million samples-per-second, enables measurement of a wide range of analog & digital modulation types. The video output port additionally provides 30 MHz video bandwidth for additional analysis or automatic level control circuits.

The power sensor has USB and Ethernet interfaces, allowing control directly from a PC, or remote power measurement over a network. The software provides peak & average power measurements, statistical analysis (crest factor, duty cycle, rise / fall time) and time domain plots for any signal type, including pulsed waveforms down to 100 ns pulse width and 0.1% duty cycle.

Full software support is provided, including our user-friendly GUI application for Windows and a full API with programming instructions for Windows and Linux environments (both 32-bit and 64-bit systems).

KEY FEATURES

Feature	Advantages
Peak, average and pulse profiling	Measure peak & average power of CW and modulated signals. Analyze and graphically plot the peak & average power, duty cycle, pulse width, crest factor, rise & fall times of pulsed signals.
External trigger controls	Trigger in and out ports support precise synchronization with external test equipment, allowing capture of irregular signal patterns & pulses.
Selectable video BW	Switch between CW, 1.5 MHz, 5 MHz & 10 MHz video bandwidths on demand to minimize measure- ment noise.
Video output port	Direct access to the modulated signal trace with 30 MHz video bandwidth for external processing or observation with an oscilloscope.
Full software support	User friendly Windows GUI (graphical user interface) allows manual control straight out of the box, while the comprehensive API (application programming interface) with examples and instructions allows easy automation in most programming environments.

Sample period	Reduced sampling rate ⁴	0.01 - 8	-	-	1,000,000	
Time base accuracy	-	-	-	-	50	ppm
Max sample rate ⁵	Sample period \leq 80 µs ⁶	0.01 - 8	-	20	-	Msps
Video bondwidth	Internal pulse profiling ⁷	0.01 - 8	-	-	10	MHz
	Video out port	0.01 - 8	-	-	30	
Minimum pulse width	-	0.01 - 8	-	-	0.1	μs
Rise/Fall time ⁷	-	0.01 - 8	-	50	-	ns
Pulse duty cycle for pulse profiling ⁵	-	0.01 - 8	0.1	-	99.9	%
DC aurrent (via LICD) 8	Ethernet disabled	0.01 0	-	650	700	
DC current (via USB) °	Ethernet enabled	0.01 - 8	-	800	860	mA
Trigger in voltages	Logic high	-	2.7	-	5.5	
	Logic low	-	0	-	0.6	
Trigger out voltages ⁹	Logic high	-	3	-	5.2	V
(at high impedance load)	Logic low	-	0	-	0.3	
Video out @ 50Ω load	Output voltage	-	0.5	-	2.2	

1. Maximum continuous safe operational power limit: +23 dBm.

2. Tested with CW signal, at CW mode

3. Power uncertainty is specified for default sample period of 80 $\mu s.$

4. As sample period increases above 80 µs resolution will decrease. To get high resolution of the pulse while maintaining large sample period use the "zoom on pulse" function in pulse profil-

ing (see page 9 for details).

5. Max sample rate is measured in millions of samples per second (Msps). With sample periods greater than 80 µs the sample rate will be reduced to allow covering the full sample period. 6. Internal video BW is selectable between CW, 1.5, 5 & 10 MHz.

7. While the sensor's internal rise time is 50 ns, this does not mean a signal with a rise time of 50 ns can be accurately measured. See page 5 for details. 8. It is recommended to use USB 3.0/3.1 port or a powered hub capable of providing at least 860 mA.

9. Internal trigger functions may not correctly identify a pulse lower than -48 dBm. If a trigger is needed for such signals it is recommended to use external trigger.

PWR-8PW-RC

Mini-Circuits

ABSOLUTE MAXIMUM RATINGS

Parameter	Ratings
Operating Temperature	0°C to 50°C
Storage Temperature	-30°C to 70°C
DC voltage at RF Ports	25 V
Trigger In	-0.3 to 5.5 V
CW Power	+26 dBm

Permanent damage may occur if any of these limits are exceeded. Operating in the range between operating power limits and absolute maximum ratings for extended periods of time may result in reduced life and reliability.

SOFTWARE SPECIFICATIONS

SOFTWARE & DOCUMENTATION DOWNLOAD:

- Mini-Circuits' full software and support package including user guide, Windows GUI, DLL files, programming manual and examples can be downloaded free of charge from: <u>https://www.minicircuits.com/softwaredownload/pm.html</u>
- Please contact testsolutions@minicircuits.com for support

MINIMUM SYSTEM REQUIREMENTS:

Parameter	Requirements		
Interface	USB HID or Ethernet (HTTP & Telnet)		
	GUI	Windows 7 or later	
System Requirements	USB API DLL	Windows 7 or later and programming environment with ActiveX or .NET support	
	USB Direct Programming	Linux, Windows 7 or later	
	Ethernet	Windows, Linux or Mac computer with a network port and Ethernet TCP/IP support	
Hardware	Pentium II or later with 256 MB RAM		
Control cable	Power sensor to be used with the supplied USB cable only		

APPLICATION PROGRAMMING INTERFACE (API) ETHERNET SUPPORT:

- Simple ASCII / SCPI command set for attenuator control
- Communication via HTTP or Telnet
- Supported by most common programming environments

USB SUPPORT (WINDOWS):

- ActiveX COM DLL file for creation of 32-bit programs
- .NET library DLL file for creation of 32 / 64-bit programs
- Supported by most common programming environments (refer to application note <u>AN-49-001</u> for summary of suported environments)

USB SUPPORT (LINUX):

- Direct USB programming using a series of USB interrupt codes
- Full programming instructions and examples available for a wide range of programming environments / languages.

Mini-Circuits

GRAPHICAL USER INTERFACE (GUI) FOR WINDOWS - KEY FEATURES

- Connect via USB or Ethernet (HTTP, Telnet) to control the module.
- Control multiple power sensors at once.

Sample Period 80 µSec - 15ec Trigger Delay (usec) 0 (0 - 1000000) Trigger Mode: • Free ○ Internal • External - On Rise • External - On Fall		Add Sensor Reset Connection Record Measurement Applications Compact View Always on top Ethernet-Config
Display Graph	Pulse Profile		Config

- Set the sample period between 4 µs and 1s to capture the pulse profile.
- Select from 4 trigger options:
 - 1. Free No trigger / free running measurements.
 - 2. Internal Detect and stabilize the measurements on the rising edge of the RF signal (at the level specified).
 - 3. External On Rise Measurements are triggered on the rising edge of an external trigger signal.
 - 4. External On Fall Measurements are triggered on the falling edge of an external trigger signal.
- Select an external output type:
 - 1. Video Output allows wider bandwidth pulses to be recorded by external measurement equipment.
 - 2. Trigger Provides a TTL output on the rising edge of a pulse for synchronization with external measurement equipment.

FULL SAMPLE PERIOD

The main pulse profile display shows the full sample period of the sensor in the time domain. Up to four markers can be set as required to measure power levels and calculate time / power deltas.

PWR-8PW-RC

ZOOM ON PULSE

"Zoom on pulse" feature will automatically zoom on the first identified pulse and allows any portion of the pulse profile to be focused on / expanded in a second graphical display. Simply 'right-click' and drag the mouse cursor over relevant section of the profile.

For signals with duty cycle greater than 99.9% or under 0.1% the automatic "zoom on pulse" may not work. In such cases, you can adjust the zoom window by clicking on the arrow icons to increment/decrement the trigger delay and span, or the magnifying glass to type in precise values.

CALCULATED PULSE PARAMETERS

Calculated Parameters		
Parameter	Value	
Pulse Width (mSec)	0.044	
Pulse Period (mSec)	8.020	
Duty Cycle (%)	0.55	
Rise Time (µs)	3.54	
Fall Time (µs)	3.54	
Pulse Pwr (dBm)	0.75	
Cycle Avg. (dBm)	-19.70	
Crest Factor (dB)	20.45	
Over Shoot (dB)	0.98	

Full pulse parameters are calculated and displayed in tabular form, including peak / average power, pulse width / period, duty cycle, rise / fall time, crest factor and overshoot.

The calculated pulse parameters are based on the waveform shown in the "zoom on pulse" window so the user should make sure that the pulse area of interest is properly displayed in that window.

ORDERING INFORMATION

Please contact Mini-Circuits' Test Solutions department for price and availability: testsolutions@minicircuits.com

Model	Description
PWR-8PW-RC	USB / Ethernet, Peak & Average Smart Power Sensor

Included Accessories	Part No.	Description
	PWR-SEN-8PW-RC	Power sensor head
Sin la	USB-CBL-AB-7+	6.8 ft (2.1 m) USB Cable: USB type A (Male) to USB type B (Male) ¹⁰
6))	CBL-5FT-BMSMB+	5.0 ft (1.5 m) Trigger cable: BNC (Male) to SMB (Female)

10. Power sensor to be used with the supplied control cable only.

OPTIONAL ACCESSORIES

USB-AC/DC-5	AC/DC +5V power adaptor with USB connector ^{11, 12}	
USB-CBL-AB-3+	2.7 ft (0.8 m) USB Cable: USB type A (Male) to USB type B (Male)	
USB-CBL-AB-7+	6.8 ft (2.1 m) USB Cable: USB type A (Male) to USB type B (Male)	
CBL-5FT-BMSMB+	5.0 ft (1.5 m) Trigger cable: BNC (Male) to SMB (Female)	
CBL-RJ45-MM-5+	5.0 ft (1.5 m) Ethernet cable: RJ45 (Male) to RJ45 (Male) Cat 5E cable	
NF-SM50+	N-Type Female to SMA Male Adapter	
NF-SF50+	N-Type Female to SMA Female Adapter	
NF-BM50+	N-Type Female to BNC Male Adapter	

11. Includes power plugs for US, UK, EU, IL, AU & China. Plugs for other countries are also available. If you need a power cord for a country not listed

please contact testsolutions@minicircuits.com

12. Power adaptor, powered hub or USB 3.0/3.1 port may be used to provide power when in Ethernet control, not needed in USB control.
