

# RF Transfer Switch Matrix **RC-2MTS-40**

Mini-Circuits

DC to 40 GHz 2.92mm-Female

### THE BIG DEAL

• Dual mechanical transfer switches

50Ω

- Wideband performance up to 40 GHz
- High reliability, 2 million switch cycles
- High isolation

### **APPLICATIONS**

- 5G node / device testing
- Automated test equipment
- Fail-safe / redundancy switching
- Switch matrices

### **PRODUCT OVERVIEW**

Mini-Circuits' RC-2MTS-40 comprises a pair of independently controlled, electro-mechanical transfer switches. Each switch operates over a wide bandwidth, from DC to 40 GHz with high isolation (70 dB typical), low insertion loss (0.5 dB typical) and high input power rating. The switches are of a fail-safe and break-before-make-configuration, with a minimum life time of 2 million switching cycles when used within the noted specifications.

The switch box is constructed in a compact, rugged metal case (4.5 x 6.0 x 2.25") with all 2.92mm (f) RF connectors on the front panel. The switches are controlled via USB or Ethernet, allowing control directly from a PC, or remotely over a network. Full software support is provided, including our user-friendly GUI application for Windows and a full API with programming instructions for Windows and Linux environments (both 32-bit and 64-bit systems).

#### **KEY FEATURES**

Feature	Advantages
Dual transfer switches	Transfer switches provide a simple DPDT switch application (2 input to 2 output switch matrix) and are a useful build- ing block in much larger switch matrices
Fail-safe design	The switches revert to a known default state when the DC supply is removed, allowing their use in systems that must continue to operate safely in the event of power failure
Break-before-make configuration	Prevents a momentary connection of the old and new signal paths, reducing the inconsistent transient effects that could otherwise be observed during switching
USB & Ethernet control	USB HID and Ethernet (HTTP / Telnet) interfaces provide easy compatibility with a wide range of software setups and programming environments
Full software support	User friendly Windows GUI (graphical user interface) allows manual control straight out of the box, while the com- prehensive API (application programming interface) with examples and instructions allows easy automation in most programming environments

- Please contact testsolutions@minicircuits.com for support

### **MINIMUM SYSTEM REQUIREMENTS:**

Parameter	Requirements		
Interface	USB HID & Ethernet (HTTP & Telnet)		
	GUI	Windows 98 or later	
System	USB API DLL	Windows 98 or later and programming environment with ActiveX or .NET support	
Requirements	USB Direct Programming	Linux, Windows 98 or later	
	Ethernet	Windows, Linux or Mac computer with a network port and Ethernet TCP/IP support	
Hardware	Pentium II or later with 256 MB RAM		

### APPLICATION PROGRAMMING INTERFACE (API) ETHERNET SUPPORT:

- Simple ASCII / SCPI command set for attenuator control
- Communication via HTTP or Telnet
- · Supported by most common programming environment

### **USB SUPPORT (WINDOWS):**

- ActiveX COM DLL file for creation of 32-bit programs
- .NET library DLL file for creation of 32 / 64-bit programs
- Supported by most common programming environments (refer to application note AN-49-001 for summary of suported environments)

### **USB SUPPORT (LINUX):**

Direct USB programming using a series of USB interrupt codes

Full programming instructions and examples available for a wide range of programming environments / languages.
