

USB / Ethernet

Programmable Attenuator

RCDAT-30G-30

50Ω 0 – 30 dB, 0.5 dB step 0.1 to 30 GHz

The Big Deal

- Precision attenuation up to 30 GHz
- Fine resolution, 0.5 dB
- Fast transitions, 100 ns
- **USB and Ethernet** control
- Control up to 25 attenuators via a single interface via 'Daisy Chain' connection

Software Package

Case Style: MS2523

Included Accessories

Model No.	Description	Qty.
MUSB-CBL-3+	2.6 ft. USB cable	1

RoHS Compliant

See our web site for RoHS Compliance methodologies and qualifications

Applications

- Transmission loss simulation
- 5G network infrastructure
- Microwave point to point links
- VHF / UHF / L / S / C / X / Ku / K band testing

Product Overview

Mini-Circuits' RCDAT-30G-30 is a precision programmable attenuator covering an extremely wide bandwidth, from 0.1 to 30 GHz. Its unique design allows attenuation settings to be programmed from 0 to 30 dB, in 0.5 dB steps with monotonic attenuation change per dB, even at the highest frequencies and attenuation settings.

The attenuator can be controlled via USB or Ethernet, allowing control directly from a PC, or remotely over a network. Full software support is provided, including our user-friendly GUI application for Windows and a full API with programming instructions for Windows and Linux environments (both 32-bit and 64-bit systems).

This model also includes Mini-Circuits' novel dynamic addressing daisy-chaining interface which allows multiple RCDAT-30G-30 attenuators to be connected together into a Master / Slave chain, with independent control of each attenuator channel through the single USB or Ethernet connection of the master unit and no need for the user to set addresses, or use any specialized control unit.

Key Features

Feature	Advantages
Extremely wide bandwidth	A single attenuator covers a diverse range of RF and microwave applications from 0.1 to 30 GHz
Daisy chain control (dynamic addressing)	Simplify control software and interconnections by cascading up to twenty five RCDAT-30G-30 units into a Master / Slave chain with a single USB / Ethernet interface
USB & Ethernet control	USB HID and Ethernet (HTTP / Telnet) interfaces provide easy compatibility with a wide range of software setups and programming environments
Programmable attenuation sweep and Hop sequences	The RCDAT-30G-30 can be programmed with a timed sequence of attenuation settings, to run without any additional external control.
Full software support	User friendly Windows GUI (graphical user interface) allows manual control straight out of the box, while the comprehensive API (application programming interface) with examples and instructions allows easy automation in most programming environments. Isolation In-Out	0.1 - 30 GHz	Note 2	-	37	-	dB		
Input operating power ³ (RF In or RF Out ports)	0.1 - 30 GHz	@ 0 - 30 dB	-	+24	-	dBm		
IP3 Input ⁴	0.1 - 30 GHz	@ 0 dB setting (P _{IN} =+5 dBm)	-	+38	-	dBm		
VSWR	0.1 - 30 GHz	@ 0 - 30 dB	-	1.40	-	:1		
Min Dwell Time ⁵	0.1 - 30 GHz	High speed mode	-	600	-	µsec		
Attenuation Transition Time ⁶	0.1 - 30 GHz	-	-	100	-	nsec		
Supply Voltage	-	via USB or serial control	4.75	5	5.25	V		
Supply Current ⁸	-	via USB control	-	-	750	mA		
DC current draw ⁷	-	Ethernet Enabled	-	400	450	mA		
	-	Ethernet Disabled	-	250	300			
Ethernet communication	Supports both Telnet and HTTP protocols over TCP/IP with dynamic(DHCP) or static IP							

¹ Attenuator RF ports are interchangeable, and support simultaneous, bidirectional signal transmission, however the specifications are guaranteed for the RF In and RF Out as noted on the label. There may be minor changes in performance when injecting signals to the RF Out port.

² Isolation is defined as max attenuation plus insertion loss; this is the path loss through the attenuator when initially powered up. After a brief delay (~0.5 sec typically) the attenuator will revert to a user defined "power-up" state (either max attenuation or a pre-set value).

³ Total operating input power on RF In or RF Out ports to bring the attenuator to about 0.1dB compression.

⁴ Tested with 1 MHz offset between signals.

⁵ Minimum Dwell Time is the time the RCDAT will take to respond to a command to change attenuation states without communication delays. In PC control mode add communication delays (on the order of ms for USB) to get actual response time.

⁶ Attenuation Transition Time is specified as the time between starting to change the attenuation state and settling on the requested attenuation state.

⁷ DC current consumption shown for a single attenuator, without any slaves connected in series.

⁸ Includes the current draw for any additional daisy-chained attenuators. Additional power supplies must be added as necessary to ensure that no more than 750 mA is sourced from any USB power source.

Absolute Maximum Ratings

Operating Temperature	0°C to 50°C
Storage Temperature	-20°C to 85°C
V _{USB} Max.	6V
Total RF power for RF In & RF Out	+35 dBm
DC voltage at RF port	+25V

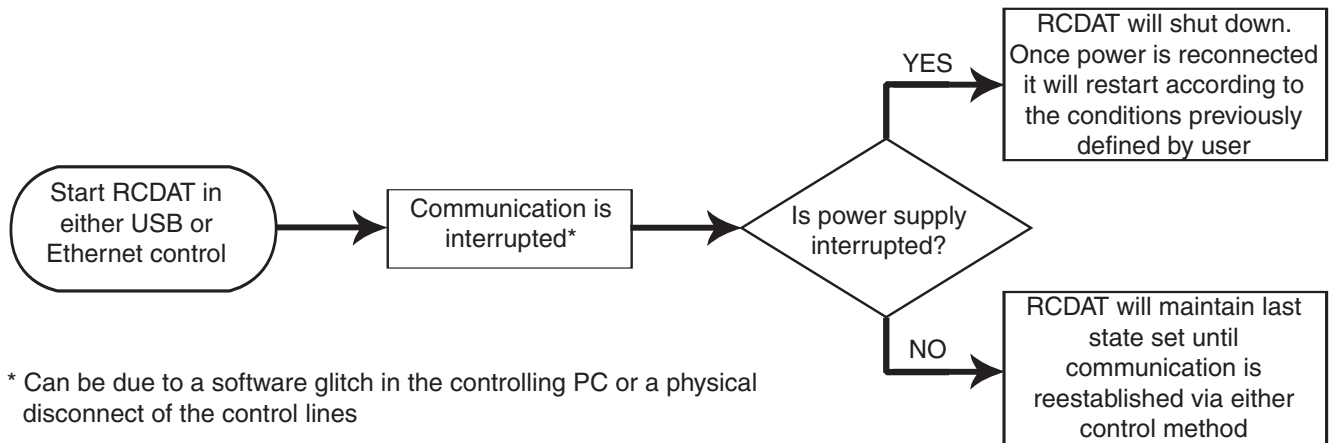

Permanent damage may occur if any of these limits are exceeded. Operating in the range between operating power limits and absolute maximum ratings for extended periods of time may result in reduced life and reliability.

Connections

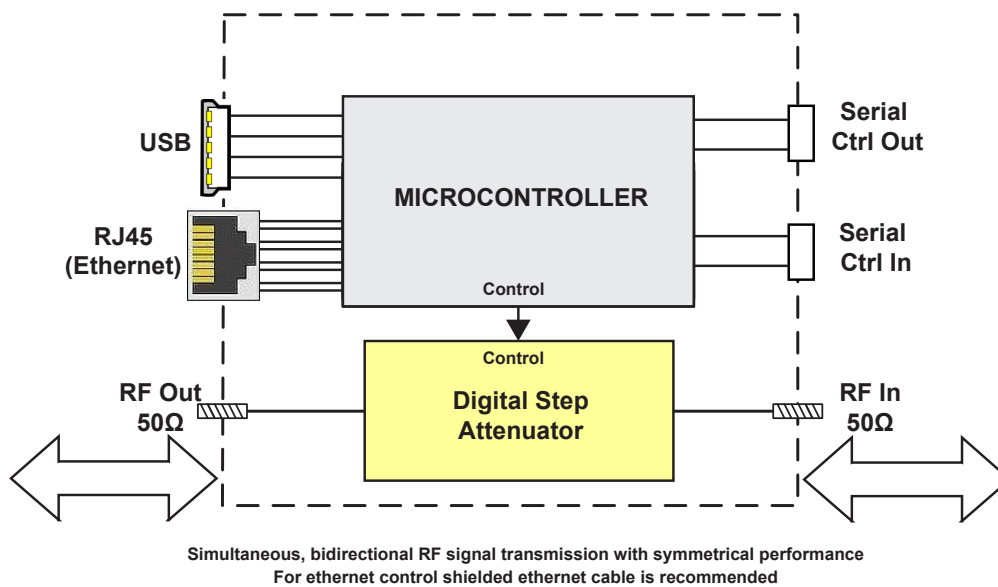

RF In	(2.92mm female)
RF Out	(2.92mm female)
USB	(USB type Mini-B female)
Network (Ethernet/LAN)	(RJ45 socket)
Serial Control Out	(10 Pin Digital Snap Fit female) ⁹
Serial Control In	(10 Pin Digital Snap Fit female) ⁹

⁹ Mating connector is Hirose ST40X-10S-CV(30)

RCDAT response to communication interrupt

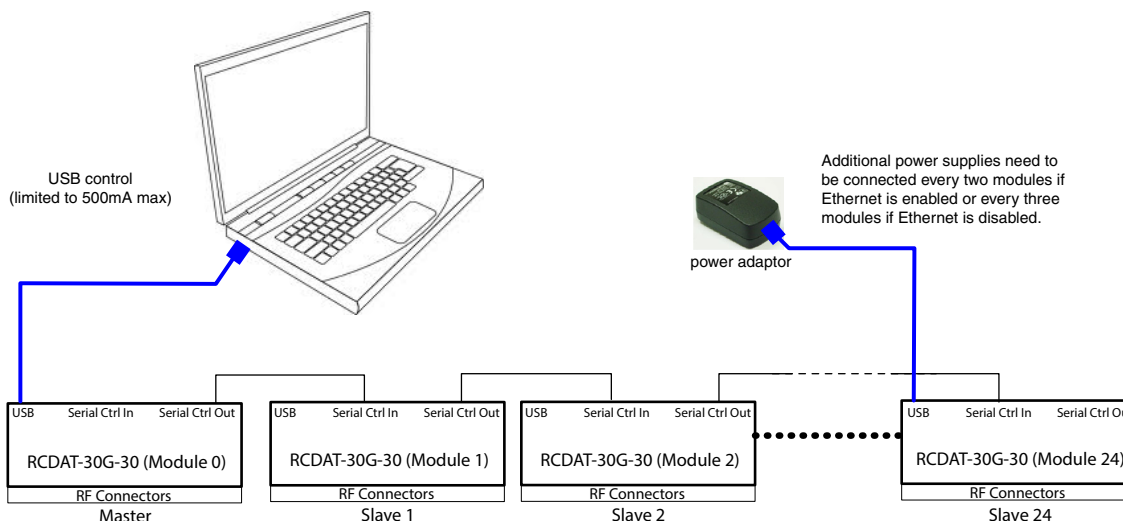

Block Diagram

Connecting multiple modules (Daisy Chain)

The RCDAT-30G-30 is designed to connect up to 25 modules in series (Daisy chain) using dynamic addressing, meaning there is no need to specifically set the address of the modules, the addresses will be set automatically as part of establishing the communications with the PC. The module connected to the PC USB port or LAN connection will be assigned address 0 (Master), the first module connected to it will get address 1 (slave) and subsequent modules incrementing up to address 24 (slave).

Connections between modules will be made using the serial in/out ports with the module connected to the PC as a master and all other as slave modules. All control will be through the master module (address zero) which is the only one communicating with the PC (via USB or Ethernet). Serial control out port of each module should be connected to the serial control in port of the next module. Power can be supplied from the PC via the master module or from additional power supplies connected to the USB ports of slave units.

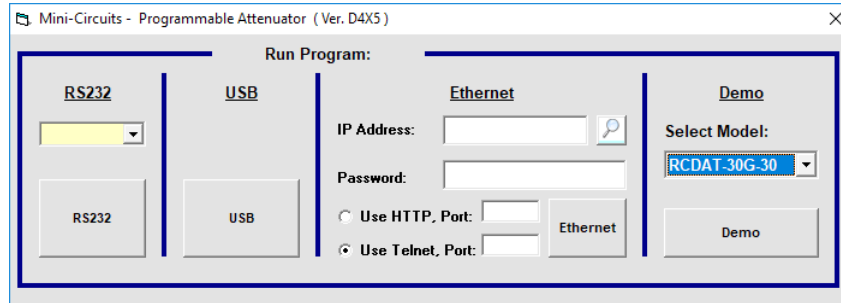

Note that with Ethernet enabled each unit will draw up to 450 mA so to connect three units in series you will need to supply 1350mA, thus it is recommended to turn off the Ethernet circuitry in the slave units to reduce the power requirements. Connecting an additional power supply will automatically cut off power draw from the serial control in port for the module connected.

The Serial master/slave bus allows connecting modules of different types to the same daisy chain as long as all support Mini-Circuits dynamic addressing setup. To add a new module to the set up simply connect the module to the setup and refresh the address listing, no need to reset any of the existing modules or assign addresses manually.

Note: Different module types may have different current consumption which will change the number of units which can be connected before additional power supply is needed.

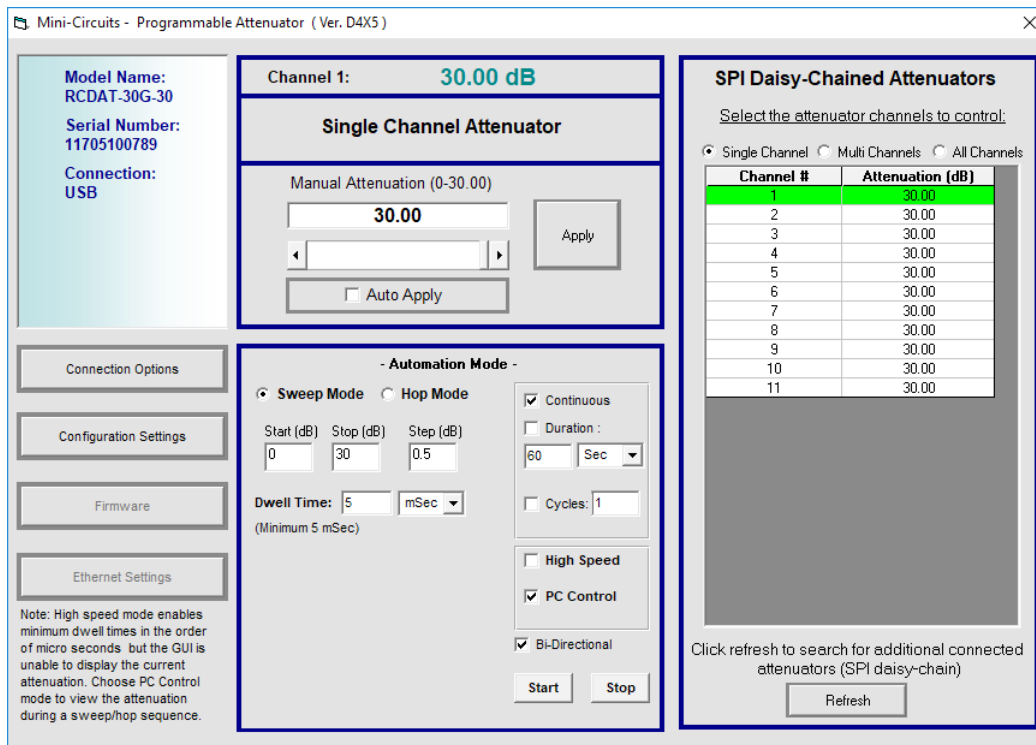

Controlling multiple modules in GUI program

Connect the attenuator you wish to use as master to either USB or LAN and connect additional units to the master using the serial control in/out ports and CBL-1.5FT-MMD+ or equivalent control cables, then start the GUI and select the control method you wish to use (USB, HTTP or Telnet, RS232 is not available in this model)

RCDAT GUI initial (control selection) screen

Once you've selected the control method the main attenuation control screen will appear, allowing you to set a fixed attenuation, an arbitrary sequence of attenuation steps, or a sweep(ramp) of attenuation for each attenuator, or for a number of attenuators at once.

RCDAT GUI main screen (USB control) with 11 units connected in series
