

TTL

Solid-State Switch

TTL-1SP8T-183

Mini-Circuits

50Ω 0.1 to 18 GHz SP8T SMA female

THE BIG DEAL

- Fast-switching, absorptive solid-state SP8T
- 100 ns switching time with no control delays
- TTL for simple control integration
- Low insertion loss

APPLICATIONS

- RF signal routing / switch matrices
- 5G FR1, WiFi 6E, UWB, Bluetooth
- Military radio, radar & electronic warfare
- Microwave radio / cellular infrastructure
- Test & measurement systems

Generic photo used for illustration purposes only

PRODUCT OVERVIEW

Mini-Circuits' TTL-1SP8T-183 is a fast switching SP8T featuring low loss and high isolation over a wide bandwidth. The switch has an absorptive configuration with internal terminations on ports J1 to J8.

Simple control via TTL logic levels allows integration with a wide range of microcontroller, embedded or custom systems, without the communication delays associated with USB or Ethernet control. This complete package enables exceptionally fast switching times down to 100 ns typically.

The switch is supplied in a low profile package (7.00" x 1.50" x 0.70") with 9 precision SMA (F) RF connectors and a D-Sub 9 pin port for power and control.

KEY FEATURES

Feature	Advantages
Excellent RF performance	Low loss, high isolation and exceptional switching speeds support applications requiring rapid signal transitions and minimal interference such as semi-conductor and telecoms testing.
Solid-state design	Long-term reliability in the most demanding automated test applications
Optimized for hot switching	+30 dBm power rating applies even when hot switching or terminating inactive ports internally. Ideal for radio test applications where the signal can't be removed during switching.
TTL control	Simple control via TTL logic levels allows integration with a wide range of microcontroller, embedded or custom systems; and extremely fast switching times without the communication delays inherent to USB or Ethernet.

	Power Input @1 dB Compression	COM to any active port	0.1 - 4	-	+20	-	dBm
			4 - 18	-	+30	-	
IP3 ¹	COM to any active port	0.5 - 18	-	+40	-	dBm	
Transition Time ²	-	-	-	50	-	ns	
Switching Time ³	-	-	-	100	-	ns	
Operating RF Input Power	Between COM & active port	Hot switching	-	-	+30	dBm	
	Between COM & active port	Cold switching	-	-	+30		
	Into any termination	-	-	-	+30		

1. IP3 degrades below 500 MHz. Tested with 1 MHz span between signals, 0 dBm per tone

2. Transition Time spec represents the time that the RF signal paths are interrupted during switching (from steady state to steady state) and thus is specified without communication delays.

3. Switching time is the time from 50% control to 90 / 10% of RF signal.

DC ELECTRICAL SPECIFICATIONS

Parameter		Min.	Typ.	Max.	Units
Positive Supply	Voltage	4.75	5	5.25	V _{DC}
	Current	-	170	200	mA
Negative Supply	Voltage	-5.25	-5	-4.75	V _{DC}
	Current	-25	-20	-	mA
Control Current per bit		-	-	100	μA

ABSOLUTE MAXIMUM RATINGS ⁴

Operating Temperature	-10°C to 60°C
Storage Temperature	-20°C to 85°C
DC Supply Voltage @ positive supply (Pin#6)	0 to 6 V
DC Supply Voltage @ negative supply (Pin#6)	-5.3 to 0 V
Voltage at TTL control pins	5.5V
DC Voltage @ RF Ports	5.5V

4. Permanent damage may occur if any of these limits are exceeded. Operating in the range between operating power limits and absolute maximum ratings for extended periods of time may result in reduced life and reliability.

TTL CONTROL LOGIC

Parameter	Conditions		Min.	Typ.	Max.	Units
Voltage Levels	Logic Low Voltage	Input	0	-	0.8	V
	Logic High Voltage	Input	3.5	-	5.0	

The switch's TTL control interface consists of 4 parallel control bits that select the desired switch state, as shown in the truth table below. The parallel control does not have any latch and thus will respond immediately to any change.

The TTL inputs have internal 100kΩ pull-down (inputs D1, D2, & D3) and pull-up (input D4) resistors to set the switch to the disconnected state (all ports including COM internally terminated) when no control signal is applied.

The DC voltage supplies to the switch are provided via the D-sub port.

Switch State	Control Bits			
	D1	D2	D3	D4
Disconnected	Don't Care	Don't Care	Don't Care	Logic High
COM -> J8	Logic Low	Logic Low	Logic Low	Logic Low
COM -> J7	Logic High	Logic Low	Logic Low	Logic Low

RECOMMENDED ACCESSORIES

TTL-1SP8T-183 is controlled via a standard 9 pin D-Sub connector and is supplied with a male-female D-Sub 9 cable. The cable is 6 feet (1.8 meter) long and uses 28 AWG wires.

CONTROL CABLE D-SUB9-MF-6+

Pin Number (Male)	Function	Description	Pin Number (Female)
1	D1	Control bit 1	1
2	D2	Control bit 2	2
3	D3	Control bit 3	3
4	D4	Control bit 4	4
5	Not Connected	Not Connected	5
6	Supply +5V	Supply Voltage (Positive)	6
7	GND	Ground connection	7
8	Supply -5V	Supply Voltage (Negative)	8
9	GND	Ground connection	9
