# **REFLECTIONLESS FILTERS DICE**

Available in Low Pass

and High Pass designs

 $50\Omega$  DC to 21 GHz

### The Big Deal

- High Stopband rejection, up to 50 dB
- Patented design terminates stopband signals
- Pass band cut-off up to 11 GHz
- Stop band up to 26 GHz
- Excellent repeatability through IPD\* process

### **Product Overview**

Mini-Circuits' *X-Series* of reflectionless filters now includes 2- and 3-section models, giving you ultra-high rejection in the stopband – up to 50 dB! Reflectionless filters employ a patented filter topology which absorbs and terminates stopband signals internally rather than reflecting them back to the source. This new capability enables unique applications for filter circuits beyond those suited to traditional approaches. Traditional filters are reflective in the stopband, sending signals back to the source at 100% power. These reflections interact with neighboring components and often result in intermodulation and other interferences. By eliminating stopband reflections, reflectionless filters can readily be paired with sensitive devices and used in applications that otherwise require circuits such as isolation amplifiers or attenuators.

| Key Features  | Advantages   |
|---|--|
| Easy integration with sensitive reflective components, e.g. mixers, multipliers | Reflectionless filters absorb unwanted signals, preventing reflections back to the source. This reduces generation of additional unwanted signals without the need for extra components like attenuators, improving system dynamic range and saving board space. |
| High stopband rejection, up to 50 dB  | Ideal for applications where suppression of strong spurious signals and intermod-<br>ulation products is needed.   |
| Enables stable integration of wideband amplifiers                               | Because reflectionless filters maintain good impedance in the stopband; they can be integrated with high gain, wideband amplifiers without the risk of creating instabilities in these out of band regions.  |
| Cascadable  | Reflectionless filters can be cascaded in multiple sections to provide sharper and higher attenuation, while also preventing any standing waves that could affect passband signals. Low & highpass filters can be cascaded to realize bandpass filters.          |
| Excellent power handling in a tiny surface mount device up to 7W in passband    | High power handling extends the usability of these filters to the transmit path for inter-stage filtering.   |
| Excellent repeatability of RF performance                                       | Through semiconductor IPD process, X-series filters are inherently repeatable for large volume production.   |
| Excellent stability over temperature  | With ±0.3 dB variation over temperature ideal for use in wide temperature range applications without the need for additional temperature compensation.   |
| Operating temperature up to 105°C   | Suitable for operation close to high power components.   |

\*IPD - Integrated Passive Device, is a GaAs semiconductor process

# Reflectionless Low Pass Filter Die

## XLF-362H-D+

50Ω DC to 3910 MHz

#### Features

- Match to  $50\Omega$  in the stop band, eliminates undesired reflections
- Cascadable
- Excellent stopband rejection, 48 dB typ.
- Temperature stable, up to 105°C
- Protected by US Patents 8,392,495; 9,705,467, additional patent pending
- Protected by China Patent 201080014266.1
- Protected by Taiwan Patent I581494

#### Applications

- ISM Applications
- Mobile
- WiMAX
- · Radio location.

+RoHS Compliant The +Suffix identifies RoHS Compliance. See our web site for RoHS Compliance methodologies and qualifications

Ordering Information: Refer to Last Page

#### **General Description**

Mini-Circuits' XLF-362H-D+ three-section reflectionless filter Die employs a novel filter topology which absorbs and terminates stop band signals internally rather than reflecting them back to the source. This new capability enables unique applications for filter circuits beyond those suited to traditional approaches. Traditional filters are reflective in the stop band, sending signals back to the source at 100% of the power level. These reflections interact with neighboring components and often result in inter-modulation and other interferences. Reflectionless filters eliminate stop band reflections, allowing them to be paired with sensitive devices and used in applications that otherwise require circuits such as isolation amplifiers or attenuators.

#### Electrical Specifications<sup>1</sup> at 25°C

| Parameter |                   | F#       | Frequency (MHz) | Min. | Тур. | Max. | Unit |
|-----------|-------------------|----------|-----------------|------|------|------|------|
|           | Insertion Loss    | DC - F1  | DC - 3910       | —    | 1.3  | —    | dB   |
| Pass Band | Frequency Cut-off | F2       | 6300            | _    | 3.0  | _    | uв   |
|           | VSWR              | DC - F1  | DC - 3910       | _    | 1.3  | _    | :1   |
| Stop Band |                   | F3 - F3' | 9200 - 10700    | —    | 28   | —    |      |
|           | Rejection         | F3' - F4 | 10700 - 18500   | _    | 48   | _    | dB   |
|           |                   | F4 - F5  | 18500 - 21000   | —    | 50   | _    |      |
|           |                   | F3 - F3' | 9200 - 10700    | _    | 1.2  | _    |      |
|           | VSWR              | F3' - F4 | 10700 - 18500   | _    | 1.4  | _    | :1   |
|           |                   | F4 - F5  | 18500 - 21000   | _    | 2.2  | _    |      |

<sup>1</sup> Measured on Mini-Circuits Characterization Test Board. Die packaged in 3x3mm, 12-lead MCLP package and soldered on TB-844-362H+.

#### Absolute Maximum Ratings<sup>4</sup>

| Parameter                                     | Ratings         |
|---|-----------------|
| Operating Temperature                         | -55°C to +105°C |
| Storage Temperature                           | -65°C to +150°C |
| RF Power Input, Passband (DC-F1) <sup>2</sup> | 4W at 25°C      |
| RF Power Input, Stopband (F2-F5) <sup>3</sup> | 1.6W at 25°C    |

<sup>2</sup> Passband rating derates linearly to 2W at 105°C ambient

<sup>3</sup> Stopband rating derates linearly to 0.8W at 105°C ambient

<sup>4</sup> Permanent damage may occur if any of these limits are exceeded.

#### Assembly Diagram

Note: Ground bond wires are optional.

#### **Assembly and Handling Procedure**

1. Storage

Dice should be stored in a dry nitrogen purged desiccators or equivalent.

2. ESD

MMIC Gallium Arsenide (GaAs) filter dice are susceptible to electrostatic and mechanical damage. Die are supplied in antistatic protected material, which should be opened in clean room conditions at an appropriately grounded anti-static worksta tion. Devices need careful handling using correctly designed collets, vacuum pickup tips or sharp antistatic tweezers to deter ESD damage to dice.

3. Die Attach

The Die mounting surface must be clean and flat. Using conductive silver filled epoxy, recommended epoxies are DieMat DM6030Hk-PT/H579/H579 or Ablestik 84-1LMISR4. Apply sufficient epoxy to meet required epoxy bond line thickness, epoxy fillet height and epoxy coverage around total Die periphery. Parts shall be cured in a nitrogen filled atmosphere per manufac turer's cure condition. It is recommended to use antistatic Die pick up tools only.

4. Wire Bonding

Bond pad openings in the surface passivation above the bond pads are provided to allow wire bonding to the dice gold bond pads. Thermosonic bonding is used with minimized ultrasonic content. Bond force, time, ultrasonic power and temperature are all critical parameters. Suggested wire is pure gold, 1 mil diameter. Bonds must be made from the bond pads on the Die to the package or substrate. All bond wires should be kept as short as low as reasonable to minimize performance degradation due to undesirable series inductance.

\*Known Good Dice ("KGD") means that the dice are taken from PCM good wafer and visually inspected in question have been subjected to Mini-Circuits while this is not definitive, it does help to provide a higher degree of confidence that dice are capable of meeting typical RF electrical parameters specified by Mini-Circuits.

ESD Rating\*\*

Human Body Model (HBM): Class 1A (Pass 250V) in accordance with ANSI/ESD STM 5.1 - 2001

\*\* Tested in industry standard MCLP 3x3mm, 12-lead package.

#### **Additional Notes**

- A. Performance and quality attributes and conditions not expressly stated in this specification document are intended to be excluded and do not form a part of this specification document.
- B. Electrical specifications and performance data contained in this specification document are based on Mini-Circuit's applicable established test performance criteria and measurement instructions.
- C. The parts covered by this specification document are subject to Mini-Circuits standard limited warranty and terms and conditions (collectively, "Standard Terms"); Purchasers of this part are entitled to the rights and benefits contained therein. For a full statement of the Standard Terms and the exclusive rights and remeDies thereunder, please visit Mini-Circuits' website at www.minicircuits.com/MCLStore/terms.jsp
- D. Mini-Circuits does not warrant the accuracy or completeness of the information, text, graphics and other items contained within this document and same are provided as an accommodation and on an "As is" basis, with all faults.
- E. Purchasers of this part are solely responsible for proper storing, handling, assembly and processing of Known Good Dice (including, without limitation, proper ESD preventative measures, Die preparation, Die attach, wire bond ing and related assembly and test activities), and Mini-Circuits assumes no responsibility therefor or for environmental effects on Known Good Dice.
