The Big Deal

- High rejection
- Good VSWR
- Connectorized package

Product Overview

ZABP-650-S+ is a 50 Ω bandpass filter with a rugged connectorized package covering the passband of 560 to 780 MHz. The bandpass filter offers good matching within the passband and provides high rejection. This filter has miniature high Q capacitors and wire welded inductors for high reliability. It has repeatable performance across lots and consistent performance across temperature.

Key Features

Feature	Advantages		
High rejection	ZABP-650-S+ has sharper transition and rejects spurious signals in the stopband.		
Good VSWR	This filter maintains typical VSWR over passband frequency range making this filter easier to inte- grate into receiver and transmitter RF chains with less concerns for in band frequency ripple.		
Connectorized package	Connectorized package is easy to interface with other devices and well suited for test setups.
