ZHL-100W-352X+

Product Overview

The ZHL-100W-352X+ is a Class AB, high-power amplifier providing 100W saturated power over the 3000 to 3500 MHz band, ideal for a variety of high-power test setups as well as applications including communications, radar and more. The ruggedly-designed amplifier provides unconditional stability and built-in self-protection against reverse polarity, excessive drive and overheating. It is capable of withstanding short and open circuits at output while continuously delivering 100W of power. Housed in a rugged aluminum alloy case measuring 5.6 x 8.8 x 1.2", the unit features SMA connectors.

Key Features

Feature	Advantages
Wideband, usable from 2800 to 3600 MHz	Suitable for a broad range of high-power, wideband applications, including test setups, communications and defense applications.
High gain, 50 dB	Enables signal amplification to 100W output without the need for multiple gain stages.
Good gain flatness, ± 1.5 dB	Provides consistent performance across frequency without the need for gain flattening using external components.
Built-in self-protection	In instances of potentially-damaging excessive drive current, heat buildup within the housing, unshorting of DC supply, and short or open loads at the output, an automatic sensing feature signals the unit to power down.
Unconditional stability	Provides reliable performance independent of input and load conditions.

1. Small signal input power -15 dBm typ.

2. Two tones, 40 dBm/line, 1 MHz spacing.

3. Power supply should be capable of delivering 20A at start up;

18 A current measurement at 100 W output.

4. Recommended Operating Voltage.

Heat sink and fan not included. Alternative heat sinking and heat removal must be provided by the user to limit maximum base-plate temperature to 60°C, in order to ensure proper performance. For reference, this requires thermal resistance of user's external heat sink to be 0.05°C/W max.
