## $50 \Omega$ Reflective RF switch 5 to $6000 \mathrm{MHz}, 4 \mathrm{~W}$ <br> Internal driver, Single Supply Voltage 2.3V to 4.8V

## The Big Deal

- Wide band, 5 to 6000 MHz
- High power +36 dBm
- High linearity, IP3 +73 dBm @ 850 MHz
- Low loss, 1.1 dB up to 6 GHz

## Applications

- Lab
- Instrumentation
- Automatic Test equipment (ATE)
- Defense

## Product Overview

Mini-Circuits' ZSW2-63DR+ is a $50 \Omega$ high power SPDT RF switch designed for automatic test equipment applications, covering a broad frequency range from 5 to 6000 MHz with low insertion loss and high linearity.
The ZSW2-63DR+ operates on a single supply voltage from +2.3 V to +4.8 V with a single pin control. The switch comes housed in a rugged, compact, aluminum alloy case ( $2.00 \times 1.5 \times 0.6$ ") with 3 SMA-F connectors at RF ports and a 9-pin D-sub connector for DC power and control signals.

## Key Features

| Feature |  |
| :--- | :--- |
| Wideband, 5 to 6000 MHz | One model can be used in many applications, saving component count. Also <br> ideal for wideband applications such as military and instrumentation. |
| High linearity, + 73 dBm IP3 | High linearity minimizes unwanted inter-modulation products which are difficult <br> or impossible to filter in multi-carrier environments, or in the presence of strong <br> interfering signal from adjacent circuitry or received by antenna. |
| Low insertion loss: <br> - 0.33 dB up to 1000 MHz <br> -1.1 dB up to 6000 MHz | Provides excellent transmission of signal power from input to output and minimizes <br> overall system loss |
| High power: <br> +36 dBm up to 6000 MHz | Suitable for signal routing applications with high power requirement such as <br> antenna feeds in transmit systems and more. |
