

50Ω 1600-2300 MHz

## Product Overview

ZT-188 was developed as a multi-function test set for low capacity trunk radio and other wireless BTS / handset test environments. The core of the system is a 4 x 8 non-blocking switch matrix, allowing up to 8 handsets / terminals to be simultaneously routed to any combination of 4 BTS, with input powers of up to 20 W per port in either direction. The system also provides auxiliary test ports which allow an external test signal to be injected to any BTS or the output to be monitored with an external spectrum analyser.
