### PRODUCT OVERVIEW

Mini-Circuits' ZT-4X12B-26-S is a high-performance, 4 by-12 blocking switch matrix, operating over a wide bandwidth from DC to 26.5 GHz. The system is integrated into a compact, 4U height, 19-inch rack-mountable chassis with 4 RF ports (A1 to A4) on the front panel and 12 RF ports (B1 to B12) on the rear. Rugged 3.5 mm female connectors are used for precision and reliability, directly compatible with SMA.

The blocking configuration supports 4 active switch paths at any time, with each of the 4 "A" ports able to connect to any of the 12 "B" ports in a one-to-one arrangement. The matrix is bi-directional so the "A" and "B" ports can be used interchangeably as both inputs and outputs.

The switch matrix can be controlled via USB or Ethernet (supporting HTTP and Telnet network protocols). Full software support includes our user-friendly GUI application for Windows and a full API with programming instructions for Windows and Linux environments.

### KEY FEATURES

Feature	Advantages
High port count	Bi-directional operation between 4 input and 12 output ports facilitates a wide range of switching applications with the integration of a large number of test systems and devices.
Blocking matrix	One-to-one switch paths with low loss when connected and high isolation when disconnected; minimizing the impact of the matrix itself on sensitive RF test results.
3.5 mm connectors	Rugged 3.5 mm connectors for precision measurements and stable connections. SMA, 2.92 mm, and 3.5 mm connectors can be mated directly without the need for adapters.
Ethernet & USB control	USB HID and Ethernet (HTTP & Telnet) interfaces ensure compatibility with most software environments and connection requirements.
Rack-mount chassis	Compact 4U height, 19" rack-mountable chassis suits integration in automated production test environments.

1. Isolation from input to output on a disconnected switch path. Example: A1 to B1 isolation is the leakage measured at B1 when A1 is connected to B2.

2. Isolation between any pair of A or B ports. Example: Isolation measured from B1 to B2.

3. Return loss into all ports in all states
