

# Mesh Network Emulator **ZTMN-0695D-T**

Mini-Circuits

 $50\Omega$  10 to 800 MHz 6-Port 0-95 dB Rack-Mount TNC Female

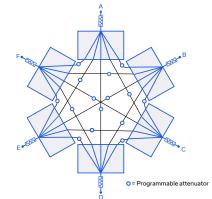

### THE BIG DEAL

- 6 fully interconnected test ports (15 internal paths)
- 95 dB programmable attenuation
- High input power, 5W per port
- · Configure automated sweep / hop / fading sequences
- Ethernet & USB control

Generic photo used for illustration purposes only

### FUNCTIONAL BLOCK DIAGRAM

### **APPLICATIONS**

- Production, R&D, qualification testing
- Military VHF radio
- PMR (private mobile radio)
- Test & measurement systems

#### **PRODUCT OVERVIEW**

Mini-Circuits' ZTMN series mesh network emulators are multi-port test systems with independently variable attenuation on each internal path. This concept allows simulation of a "real-world" mesh communication network within the confined space of a test environment. Path loss can be varied independently between any pair of devices on the network without affecting any other combination of devices, allowing simulation of a complex range of test cases.

ZTMN-0695D-T is a 6-port mesh covering the 10 to 800 MHz band, with 5W input power rating per port and 0 to 95 dB attenuation range on each of the 15 internal paths. The model is housed in a compact, 2U height, 19-inch rack chassis with all RF connectors on the front panel. The ZTMN series also supports larger mesh network combinations, custom attenuation and frequency ranges available on request.

The system can be controlled via USB or Ethernet (supporting SSH, HTTP & Telnet protocols), allowing local control directly from a PC, or remotely over a network. Full software support is provided, including our user-friendly GUI application for Windows and a full API with programming instructions for Windows and Linux environments.

#### **KEY FEATURES**

Feature	Advantages
Wide attenuation range	Independently controllable 0-95 dB attenuators on each path allow simulation of a wide range of test scenarios including receiver sensitivity, device / base-station handovers, device failures, and interference effects.
High input power	5W input power rating on each port supports direct connection to high power radio transmissions.
Rack-mount chassis	Compact 2U height, 19" rack-mountable chassis suits integration in automated production test environments.
Ethernet & USB control	USB HID and Ethernet (SSH / HTTP / Telnet) interfaces ensure compatibility with most software environments and connection requirements.

### **ELECTRICAL SPECIFICATIONS AT +25°C**

Parameter	Conditions	Min.	Тур.	Max.	Units	
Frequency Range	-	10	-	800	MHz	
	10 - 500 MHz		38	41		
Insertion Loss	500 – 800 MHz		40	43	dB	
	Indirect path <sup>2,4</sup>	60	70	-	-ID	
Isolation	Direct path <sup>3</sup>	95	110	-	dB	
Return Loss	-		25	-	dB	
Attenuetica Dealer	0.25 dB steps	0	90	-		
Attenuation Range	0.5 dB steps	90	95	-	dB	
Attenuation Steps	Nominal		0.25	-	dB	
Input Power	-		-	5	W	

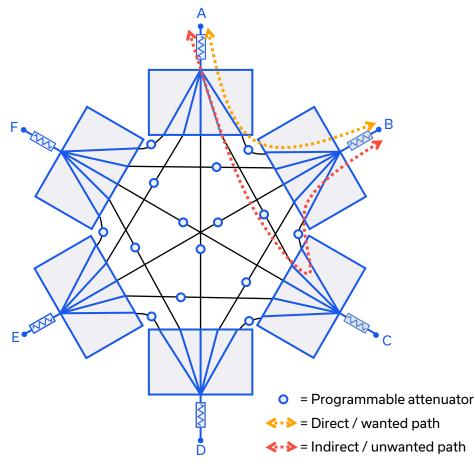

1. Path loss on the direct path between 2 ports when the attenuator in path is at 0 dB.

2. Path loss on the indirect / unwanted path between 2 ports with the 2 attenuators in path at 0 dB and all others at 95 dB (limited by the isolation characteristic of the internal splitter combiner component)

combiner component). 3. Path loss on the direct path between 2 ports with all attenuators at 95 dB.

4. It is recommended to set all attenuators to max attenuation initially due to the isolation effects described in note 2, then reduce the attenuation on specific paths as required by the test configuration.

Mini-Circuits

50 $\Omega$  10 to 800 MHz 6-Port 0-95 dB Rack-Mount TNC Female

# **CONTROL INTERFACES**

Ethernet Control	Supported Protocols	TCP / IP, SSH, HTTP, Telnet, DHCP, UDP (limited)
Ethemet Control	Max Data Rate	100 Mbps (100 Base-T Full Duplex)
USB Control	Supported Protocols	HID – High Speed
USB CONTROL	Min Communication Time <sup>5</sup>	400 µs typ

5. Based on the polling interval of the USB HID protocol (125 µs with 1024 bytes per packet) and no other significant CPU or USB activity

#### **SOFTWARE & DOCUMENTATION**

Mini-Circuits' full software and support package including user guide, Windows GUI, API, programming manual and examples can be downloaded free of charge (refer to the last page for the download path).

A comprehensive set of software control options is provided:

- · GUI for Windows Simple software interface for control via Ethernet and USB
- Programming / automation via Ethernet
- Complete set of control commands which can be sent via any supported protocol simple to implement in the majority of modern programming environments
- Programming / automation via USB
  - DLL files provide a full API for Windows with a set of intuitive functions which can be implemented in any programming environment supporting .Net Framework or ActiveX
  - Direct USB programming is possible in any other environment (not supporting .Net or ActiveX)

Please contact testsolutions@minicircuits.com for support

MINIMUM STSTEM REQUIREMENTS			
Hardware Intel i3 (or equivalent) or later			
GUI (USB or Ethernet Control) Windows 7 or later			
USB API DLL	Windows 7 or later with support for Microsoft .Net Framework or ActiveX		
USB Direct Programming Windows 7 or later; Linux			
Ethernet         Windows, Linux or macOS with Ethernet TCP / IP support			

# **MINIMUM SYSTEM REQUIREMENTS**

#### **PROGRAMMING COMMANDS**

The key ASCII / SCPI commands for control of the system for control via the Ethernet or USB API are summarized below (refer to the programming manual for full details):

Command / Query	Description
:MN?	Read model name
:SN?	Read serial number
:FIRMWARE?	Read firmware version
:[address]:[channels]:SETATT:[value]	<ul> <li>Set attenuation <ul> <li>[address] = Address of the attenuator module (refer to the Attenuator Path Map table)</li> <li>[channels] = Channel number (1 to 4) within the 4-channel attenuator module. Multiple channels can be listed in a string, separated by colon (":").</li> <li>[value] = Attenuation value to set (from 0 to 95 dB)</li> <li>Example 01:CHAN:1:2:3:SETATT:10.25</li> </ul> </li> </ul>
:[address]:[channels]:ATT?	<ul> <li>Return a single attenuator value:</li> <li>[address] = Address of the 4-channel attenuator module (refer to the Attenuator Path Map table)</li> <li>[channels] = Channel number (1 to 4) within the 4-channel attenuator module</li> <li>Example 01:CHAN:1:ATT?</li> </ul>
