Wideband Amplifier

50Ω 18 to 45 GHz Coaxial 3/4 W

ZVE-453G+
ZVE-453GX+
THE BIG DEAL

- High gain 41 dB typ. over the entire operating band
- Good gain flatness, ±3 dB typ.
- Saturated output power = +29 dBm typ. over 24 to 32 GHz
- Adjustable DC voltage, +10 to +15 V
- High Active Directivity (Isolation-Gain), 40 dB typ.

PRODUCT OVERVIEW

Mini-Circuits' ZVE-453G+ is a coaxial, ½ Watt wideband high gain amplifier, operating from 18 to 45 GHz. This model operates over a single positive supply range of +10 to +15 V, allowing users to choose their desired operating voltage. Internal DC-DC conversion circuitry maintains constant efficiency over the full input voltage range. The amplifier incorporates several DC-protection features, such as over-voltage, reverse voltage and in-rush current, that protect the amplifier from damage if mishandled during operation. The wideband operation combined with high output power makes this amplifier an ideal choice for testing and instrumentation applications.

KEY FEATURES

Feature	Advantages
Wide-band amplifier, 18 to 45 GHz	A single amplifier serves the need for applications including 5G bands (24 to 39 GHz), SATCOM, Test & Instrumentation, etc.
Integrated fan assembly	Model ZVE-453G+ utilizes two integrated fans, keeping the amplifier cool to the touch during normal operation at room temperature
High gain Low VSWR Medium RF power	Delivers rated power when connected to most lab signal generators enabling it to be used for many test applications.
Adjustable DC Supply Voltage	The device is capable of operating from +10 to +15 V with consistent DC power consumption
DC Protection – Over-voltage Reverse voltage In-rush Current	The internal DC circuitry allows the amplifier to be protected from external mishandling, that could lead to catastrophic failures in the field
High Active Directivity (Isolation-Gain), 40 dB typ.	High active directivity enables it to be easily integrated into high power amplifier chains minimizing interaction with adjacent circuitry.

1. Open and short-circuit loads are not recommended at the amplifier output. Ensure proper 50 Ohm load before turning the amplifier "ON".

2. Device operating power is based on current when amplifier is in saturation.

3. For units with heatsink, limit ambient temperature to 50 °C.

4. For units without heatsink, limit the maximum baseplate temperature to 60 °C.
