Product Overview

Mini-Circuits' ZFLM-43-5W+ is a coaxial RF limiter ideal for protecting sensitive receiver circuitry from high-power signals, while allowing low-scattered signals to be received. Providing input limiting range from +10 to +37 dBm and +12 dBm output power, this model is suitable for many situations where unwanted signals prevail such as manufacturing sites, train tunnels, radar transceivers and more. The unit comes housed in a rugged, aluminum alloy case (1.25" x 1.25 x 0.75") with SMA connectors.

Key Features

Feature	Advantages
Wideband, from 20 to 4000 MHz	Ideal for a variety of applications requiring protection of sensitive receiver circuitry from unwanted signals, ESD and power surges on the network.
Wide limiting range from +10 to +37 dBm	Prevents a wide range of high input signal levels from passing through the network and damaging sensitive electronic components.
Low Δ output / 1 dB Δ input • 0.3 dB, +10 to +20 dBm input range • 0.1 dB, +20 to +37 dBm input range	Low delta output per 1 dB delta input maintains signal stability in the presence of volatile input signal conditions.
Rapid recovery, 33ns	Minimal downtime after unwanted signals are removed with very quick restoration of standard operating levels.
Low insertion loss, 0.36 dB	Preserves the strength of low-power signals in the receive path.
Low-output power, +12 dBm	Low output power prevents saturation of receiver circuitry and provides extra protection for sensitive components.
