PRODUCT OVERVIEW

Mini-Circuits' ZVE-403-K+ is a Class-A, four-stage, unconditionally stable amplifier providing flat gain over an extremely wide frequency range from 26 to 40 GHz. This model is capable of delivering up to 0.125W output power at P3dB with high output IP3 supporting a wide range of sensitive, high-dynamic range receiver applications and many systems where high performance over wideband is needed. It operates on a +12V supply and features built-in safety features including protection against reverse bias and immunity to accidental (less than 2 minutes) open or short loads. The amplifier comes in a rugged, compact case (1.2 x 0.46 x 0.45") with K-type (2.92mm) connectors and an optional heat sink for efficient cooling.

KEY FEATURES

Feature	Advantages
Ultra-wideband, 26 to 40 GHz Able to work from 25 to 42 GHz	Enables a single amplifier to be used in a wide range of applications.
Excellent gain flatness, ±2.0 dB across full frequency range	Provides consistent performance across its operating frequency, minimizing the need for external equalizing networks in wideband applications.
High gain, 22 dB typ.	Reduces the number of gain stages, lowering component count and overall system cost.
Class A Amplifier	Provides good linearity with low signal distortion.
High Output IP3: +28 dBm typ.	The high IP3 results in high SFDR (Spurious Free Dynamic Range) and makes the ZVE-403-K+ ideal for use in high performance receiver front end (RFE) as it gives the user the advantages in a real world of multi-tone interference.
Rugged design	Built-in protection against reverse bias and accidental open and short loads provides added reliability for demanding operating conditions.
