Integrated Frequency Counter & Power Meter

FCPM-6000RC

50Ω   -30 dBm to +20 dBm,   1 MHz to 6000 MHz

The Big Deal

- Automatically synchronized power & frequency measurements
- **USB** *and* **Ethernet** control
- Includes GUI with measurement applications software, simplifying complex measurements
- Measurement speed 30ms

CASE STYLE: JL2029

Product Overview

Mini-Circuits' FCPM-6000RC Integrated Frequency Counter & Power Meter is a compact (5.00 x 2.66 x 1.36") precision test device controlled via USB or Ethernet (HTTP and Telnet protocols) or operated as standalone test instrument. It simplifies test setups by enabling synchronized frequency and power measurements from a single device. The unit features an LCD display allowing convenient readings directly off the measurement head, while our user-friendly GUI software enables easy remote test management via USB or Ethernet.

Full software support is provided, including our user-friendly GUI application for Windows and a full API and programming instructions for both Windows and Linux environments (32-bit and 64-bit systems). The latest version of the full software package can be downloaded from **https://www.minicircuits.com/softwaredownload/fcpm.html** at any time.

Key Features

Feature	Advantages
USB & Ethernet control	USB HID and Ethernet (HTTP / Telnet) interfaces provide easy compatibility with a wide range of software setups and programming environments
'Measurement Application' GUI software built-in	Automated measurement setups which allow the user to perform measurements on RF components such as Couplers, Filters, Amplifiers, etc., display numerical data and graphs, and analyze the data.
LCD character display	LCD character display providing the frequency and power readings, as well as information on the unit's status.
Operates with external or internal reference	The FCPM-6000RC can operate either synchronized with an external 10 MHz reference signal or independently, using its internal reference depending on user preference.
No calibration required before taking measurement	The FCPM-6000RC does not require any reference signal for calibration, reducing test time and simplifying operation.
5V power supply	Powered via USB plug from PC, AC adapter or from commercially available Power Over Ethernet (PoE) splitter with 5V output.

[1] All specifications apply to continuous wave (CW) signals.
[2] Maximum continuous safe operational power limit: +23 dBm. Performance is guaranteed up to +20 dBm.
[3] The FCPM-6000RC can operate down to -32 dBm, however performance is guaranteed only in the range specified in the table.
[4] Minimum power for Frequency measurement at 190-240 MHz may degrade by up to 3 dB due to measurement band switching.
[5] When using Faster mode at high frequencies below -20dBm, use of averaging is recommended to prevent noise errors.
[6] When using Faster mode power reading below -20dBm, uncertainty value may increase by up to 0.2 dB relative to Low noise mode power reading.
[7] Accuracy shown using external 10 MHz reference synchronized to test signal. Using Internal Reference adds 2 ppm of tested frequency to the accuracy values shown.
[8] Software function set by user, default option 1000 mec.

Absolute Maximum Ratings

| Parameter	Ratings
Operating Temperature	0°C to 50°C
Storage Temperature	-30°C to 70°C
V_{USB} Max.	6 V
DC Voltage @ RF port	15 V
RF Power(CW) @ RF port	+25 dBm
DC Voltage @ Reference Input	25 V
RF Power(CW) @ Reference Input	+13 dBm

Permanent damage may occur if any of these limits are exceeded. Operating in the range between operating power limits and absolute maximum ratings for extended periods of time may result in reduced life and reliability.

Minimum System Requirements

Parameter	Requirements	
Interface	USB HID or HTTP Get/Post or Telnet protocols	
System requirements	GUI:	Windows 32 & 64 bit systems from Windows 98 up to Windows 10
	USB API (ActiveX & .Net)	Windows 32 & 64 bit systems with ActiveX or .Net support from Windows 98 up to Windows 10
	USB direct programming support	Linux, Windows systems from Windows 98 up to Windows 10
	HTTP or Telnet	Any computer with a network port and Ethernet-TCP/IP (HTTP or Telnet protocols) support
Hardware	Pentium® II or higher, RAM 256 MB	
Y control cable for USB and Ethernet (supplied)	Model to be used with the supplied control cable only	

Graphical User Interface (GUI) for Windows
Key Features:

- Automatically synchronized power and frequency measurements.
- Relative and Average power measurements
- Setting measurement speed for power and frequency independantly.
- Freq. & Power measurment data recording
- Measurement application tools
- online graphical display of power measurement
- USB, HTTP or Telnet control of FCPM
- Setting Ethernet configuration
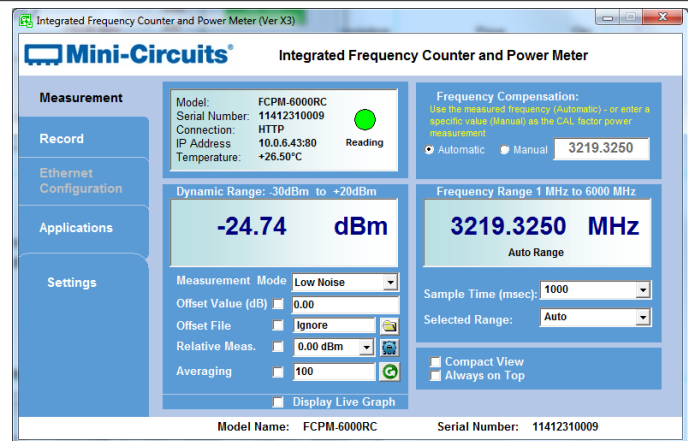

Application Programming Interface (API)
Windows Support:

- API DLL files exposing the full power sensor functionality
  - ActiveX COM DLL file for creation of 32-bit programs
  - .Net library DLL file for creation of 32 / 64-bit programs
- HTTP Get/Post and Telnet protocols use SCPI commands to provide full control.
- Supported by most common programming environments (refer to application note **AN-49-001** for summary of tested environments)

Linux Support:

- Full power sensor control in a Linux environment is achieved by way of USB interrupt commands.
