The Big Deal

- High rejection
- Good VSWR, 1.3:1 typical in passband
- Narrow Bandwidth
- Flat group delay over passband
- Rugged unibody construction
- Connectorized package

Product Overview

SBP-240+ is a 50Ω bandpass filter in a connectorized package. This bandpass filter covers from 238 to 242 MHz, these units offer good matching within the passband and high rejection. This unit uses a miniature high Q capacitors and wire welded inductors for high reliability. It has repeatable performance across production lots and consistent performance across temperature.

Key Features

Feature	Advantages
High rejection	This enables the filter to attenuate spurious signals and reject harmonics for broad frequency band.
Good VSWR, 1.3:1 typical in passband	This provides well matched input and output ports.
Flat group delay over passband	The model has flat group delay of over passband which ensures that the signal distortion is very less.
Connectorized package	Connectorized package is easy to interface with other devices and well suited for test setups.
