Product Overview

Mini-Circuits' ZTDAT series multi-channel programmable attenuator systems are ideal for a wide range of signal level control applications including transmission loss simulation, signal fading and MIMO measurements. The 1-8000 MHz operating bandwidth incorporates most of the common communications bands, supporting applications in LTE, 4G / 5G, IoT, Bluetooth, Zigbee, WiFi 6E and many more.

Each of the 8 independently controlled attenuator channels within ZTDAT-8-8G95S provides 0 to 95 dB attenuation with more than 100 dB isolation between channels. The system is housed in a compact, 1U height, 19-inch rack chassis, with SMA connectors on the front and rear panels.

The system can be controlled via USB or Ethernet (supporting SSH, HTTP & Telnet protocols). Full software support is provided, including our user-friendly GUI application for Windows and a full API with programming instructions for Windows and Linux environments (both 32-bit and 64-bit systems). The full software and documentation package can be downloaded from our website at:

https://www.minicircuits.com/softwaredownload/multiatt.html.

Mini-Circuits' novel daisy-chaining interface allows multiple ZTDAT attenuator systems to be cascaded together into a Master / Slave chain. The full chain effectively becomes one system with every attenuator channel (from 8 to several hundred) controlled through a single USB or Ethernet connection and software interface.
Key Features

Feature	Advantages
Integrated attenuator system	Independent control of large numbers of attenuator channels with single power supply and control interface; ideal for testing receiver sensitivity, device / base-station hand-over, interference effects and many more.
Compact package	The compact 1U height chassis minimises rack space requirements.
Ethernet / LAN Control	Remote control from any computer or device with a network connection (SSH, HTTP or Telnet protocols).

Programming Commands

• The key ASCII / SCPI commands for control of the system are summarized below
• These can be sent via the USB or Ethernet API
• Please refer to the programming manual for full details

Command / Query	Description
:MN?	Read model name
:SN?	Read serial number
:FIRMWARE?	Read firmware version
:address:CHAN:channel:SETATT:att	Set a single attenuator channel: • address = address of the 4-channel attenuator block (01 to 04), refer to block diagram • channel = individual channel within the attenuator block (1 to 4) • att = the attenuation value to set • Example: :01:CHAN:1:SETATT:10.25 (set RS4DAT 01, channel 1 to 10.25 dB)
:address:CHAN:channel:ATT?	Read a single channel's attenuation: • address = address of the 4-channel attenuator block (01 to 04), refer to block diagram • channel = individual channel within the attenuator block (1 to 4) • Example: :01:CHAN:1:ATT?10.25 (get attenuation of RS4DAT 01, channel 1)

Graphical User Interface (GUI) for Windows - Key Features

- Connect via USB or Ethernet
- Run GUI in "demo mode" to evaluate software without a hardware connection
- View and set all attenuator channels independently or in groups
- Configure automated attenuation sweep or hop sequences
- Configure Ethernet settings
- Upgrade firmware

Daisy-Chain Control of ZTDAT Systems

Multiple ZTDAT attenuator racks can be combined to form much larger programmable attenuator systems by daisy-chaining the serial control interfaces. This allows large numbers of attenuator channels to be controlled through a single USB or Ethernet connection and software interface. All software commands are issued to the Master unit (the first unit in the chain) which will in turn control all Slave units as required. The process is:

1. Connect the Serial Out port of the first ZTDAT unit to the Serial In port of the next ZTDAT unit
2. Continue connecting additional ZTDAT units in the same manner, as required
3. Connect the AC power inputs for all ZTDAT units in the chain
4. Connect the control connection (USB or Ethernet) to the first ZTDAT in the chain; this becomes the Master unit
5. Each individual attenuator channel within the cascaded chain can now be addressed as if they are part of the Master
